

1. DEMO:

- a. Embed your demo mobile research app in a clinical narrative (rather than implementing an intervention piece into your app if you have not already done that). In other words, put the data collection in the context of a clinical care loop where data collected feeds back to patient caregiver or clinician.
- b. Do not make up a story but base it in a protocol for clinical care in your disease context. It need not be a complete end to end implementation but rather narrative complete. Have a reference to refer to for the clinical care loop and PRO.
- c. Email me w any questions or for feedback.

2. POSTER:

- a. use open studio poster format to thread together your homeworks and create a narrative of the data and systems that you explored related to your condition that ends w the demo context above.
- b. The poster should not involve any new content beyond 1... just curating and formatting
- c. NO NEED to print, just plan on presenting it

3. PRESENTATION

- a. In class presentation per group
- b. ~10 min for demo and discussing insights from your explorations this term (i.e., your poster).
- c. Plan to pay attention, laptops closed (all rows), and ask questions of one another.
