ABSTRACT

The manuscript should start with an abstract of the paper that summarises the scope, aims, results and conclusions of the work. The abstract section is mandatory and **MUST** be less than 200 words.

To prepare your paper please use directly this template and simply replace this text with your text.

These instructions are to be followed strictly, and it is strongly advised to use the styles indicated in this document in between square brackets. It is strongly advised NOT to use formatting or styles in your paper different from the ones mentioned here.

Manuscripts using no templates or templates for other journals will **NOT** be accepted.

Keywords: Add Three To Five Keywords here

1. Introduction

The main text can start here. The normal text should use the normal style. Palatino Linotype font style must be used for all texts.

The manuscript title must be in "Title Case", i.e., when writing a name or a title, you should only use capital letters for the principal words. Do not use capital

letters for prepositions, articles or conjunctions unless one is the first word. The corresponding author should be denoted with an asterisk after the superscript number denoting the affiliation. Below the affiliations, the email of the corresponding author should be provided. Note – the words “email” or “e-mail” should be omitted. On the line for the corresponding author email, please put ONLY the email without any added remarks, marks, and especially without an asterisk.

In the header of the odd pages please insert the surname and initials of the first author as indicated by the example pattern. Please do not modify anything else in the headers and the footers.

Please do not use bold or italics in the text. They are reserved for headings.

Do NOT begin a new section directly at the bottom of the page, but transfer the heading to the top of the next page. It is requested to eliminate the usage of footnotes. All references should be in the References section. Explanations should be preferably included in the text.

2. Measurements and Units

Please use the SI set of units as much as possible. Wherever the application domain uses a different set of units widely, please minimize the use of non-standard units or non-standard symbols for those units. For example, the use of “a” for year (annum) is depreciated and the use of “y” is encouraged instead. Similarly, “hr” should be used for hours instead of “h” and “t” instead of “ton” or “tonne”. It is important to take care of the case in which the measurement units are typed. E.g. “Km” does not mean “kilometres”, but “Kelvin-meters”.

When providing numerical values followed by measurement units, please leave a regular space or non-breaking space between each value and the measurement unit. This also includes percentages and degrees Celsius (e.g. 42 %, 234 °C, 504 K). This rule also applies to the unit for litre, which is recommended to be capital “L”.

The authors are encouraged to render the numbers specifying the dot as a decimal separator and the comma as a thousands separator. Would you use British style for numbers – i.e. 1,000,000 and not 1000000 or 1 000 000.

3. Equations

Make sure that the placing and numbering of equations are consistent throughout your manuscript. References to the equations should be as Eq. (1).

$$(1 + x)^n = 1 + \frac{nx}{1!} + \frac{n(n-1)x^2}{2!} + \dots \quad (1)$$

Leave some extra spacing above and below the equation inside the equation paragraph (recommended 6 pt before and 6 pt after), left align the equation and put the number of the equation flush-right, using a Right Tab on the right margin. It is strongly recommended to use a 1-row table without grid lines, as shown in the example, as this guarantees correct vertical alignment (middle).

4. Figures and Tables

4.1 Figures

Figures and tables should be originals or sharp prints. As the manuscript will be reproduced in black-white, any picture should not use colours, or if colours are used, the authors must make sure that the figures are legible and understandable in greyscale mode. Avoid referencing your text to coloured items in the figures. All these means will be lost after the printing and will create misunderstanding for the reader.

Figures and tables should preferably be placed either at the top or at the bottom of the page. Please do not render tables as pictures and please do not use too small font sizes in the pictures. These methods reduce the legibility severely, resulting in poor reader experience.

All figures and tables should have captions with labels “Figure” and “Table”. Please make sure that the label words start with capital letters. The cross-references to the figures and the tables should use only labels and numbers, labels also starting with capital letters. Figure captions should be placed below the figures and table captions above the tables.

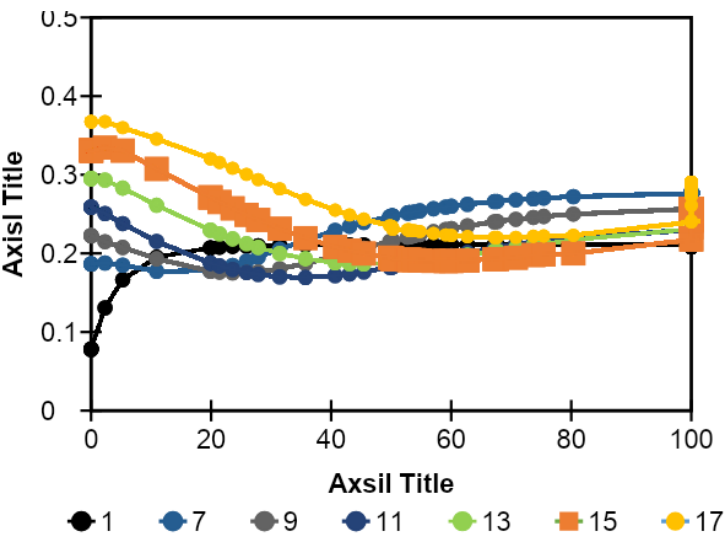

Figure 1: The caption should be placed below the figure with size 11.

4.2. Tables

Set the table caption with the number flush left above the table. Horizontal lines should be placed above and below table headings and at the bottom of the table. Vertical grid lines should be avoided.

Table 1. Bold font size 11 and 0.4 before the text.

item	1	2	3	4	5	6
Parameters and variables	0.001	0.005	0.01	0.05	0.10	0.50
Time	1.00	1.00	1.56	1.66	1.60	1.50
(days)	695	670	640	600	620	660

Tables have to be included in the text. If a table is too long to fit one page, the table number and heading should be repeated on the next page before the table is continued. Alternatively, the table may be spread over two consecutive pages (first an even-numbered, then an odd-numbered page) turned by 90°, without repeating the heading.

5. Reference in the text

In order to give our readers a sense of continuity, we encourage you to identify previous articles in related journals. Also, please reference sources from the prominent series “International Journal of Engineering Research” – of which the current proceeding will be a part. Please, perform a literature check of the papers published in such sources in recent years.

IMPORTANT. Using a list of lumped references is not very helpful for a reader. If you need to use more references at least a short assessment/justification should be provided – individually.

Citation in the text to a literature source is given by the surname of the author(s) followed by the number of the reference, e.g. "Alsadaie and Mujtaba [1] have reported ..., which was recently confirmed [2]." For references with more than two authors, text citations should be shortened to the first author followed by "et al." However, in the list of References the names and initials of all authors should be mentioned. Just "et al." is neither ethical nor politically correct. Using multiple references in a sequence is not very helpful for a reader. If you need to use more references at least a short assessment/justification should be provided.

Two or more references by the same author published in the same year are differentiated by the letters a, b, c, etc. immediately after the year. The references should be listed in alphabetical order in the list of References.

6. Conclusions

It is mandatory to have conclusions in the manuscript. This ensures completeness of the presentation as well as provides the readers with an idea about the significance of the achievements in the presented work. The conclusions should contain quantitative reasoning where appropriate.

For the list of references please use the style from the examples below. For more detailed examples please refer to previously published papers of this journal series and do not hesitate to contact the editors team at IJER@su.edu.ly.

For books, thesis, reports etc. - would you provide both the place and country where the book was published?

Nomenclature

A	area	m ²
D	Diameter	m
