Job Title: QA Automation Engineer

Job Summary

We are looking for a **QA Automation Engineer** with strong expertise in **Selenium, Playwright, and API testing** to ensure high-quality web applications. The candidate should be hands-on in automation, capable of performing manual validation when required, and comfortable working in an Agile environment.

Key Responsibilities:

- Design, develop, and maintain **automated test scripts** using:
    - **Selenium (Java)** for web automation
    - **Playwright** (Java / JavaScript / TypeScript)
- Develop and execute **API automation tests** using **Postman and REST-assured**
- Create and maintain **test plans, test scenarios, and test cases**
- Execute **regression, smoke, and functional test suites**
- Identify, log, and track defects with clear reproduction steps
- Collaborate closely with developers and product owners in **Agile/Scrum** teams
- Participate in **code reviews, sprint meetings, and defect triage discussions**
- Ensure adequate **test coverage** and contribute to improving automation stability

Required Skills & Qualifications

- **4–6 years** of experience in QA Automation and Manual Testing
- Strong hands-on experience with **Selenium using Java**
- Experience with **Playwright automation**
- Solid understanding of **API testing** using **Postman and REST-assured**
- Good **Java programming** skills
- Experience in **manual testing**, UI validation, and defect reporting
- Familiarity with **Git** and CI/CD execution (basic level)
- Experience working in **Agile environments**

Nice to Have

- Exposure to **BDD frameworks** like Cucumber
- Basic knowledge of CI/CD pipelines

- Experience with cross-browser testing tools
- **E**xperience with Cypress automation is an added advantage

What We're Looking For

- Strong automation mindset with attention to detail
- Ability to work independently and take ownership of test activities
- Good communication and collaboration skills
- Focus on delivering high-quality, reliable test automation
