

[What kind of heater is safe to use in a tent?](#)

Enjoy [Camping](#) With The Help Of These Tips

When you go [Camping](#), you need the proper equipment to be fully prepared. There are many companies and stores that will try to sell you the most expensive equipment for your [Camping](#) needs, but you shouldn't listen to them. There is affordable camping equipment out there, and this article will show you what it is and how to find it. When it comes to food, bring only what you need on a camping trip. Extra food out in the wilderness is a calling card for wild animals to come visiting your campground. If you do find that you have additional food, tie it up in cloth and hang it as high as you can in a tree away from your immediate campground. This will help keep you from unwanted animal introductions.

What is the difference between glamping and camping?

At night, create "bear bags." Tie a rope around the bags with your food and your trash. Then, find a tree and toss bags over a branch, raising until they are at least seven or eight feet off the ground. Tie the rope around the tree so it is secure. This way, bears and other animals will not be able to get into your food and trash during the night. While camping seems synonymous with a campfire, that campfire doesn't necessarily have to be made from wood. In fact, it might be safer and easier to use a portable campfire unit powered by propane. For the most part, these units are permitted unless there is a fire ban in place. Marshmallows taste just as good from these units as they do over an open, wood-burning fire, too. Know the climate of your camping area. You will want to have the proper clothing packed for the trip. Knowing how cold the nights get or how hot the days are will help you dress best. You will not want to get caught in the great outdoors with inadequate protection.

What do you put under an air mattress when camping?

When camping, most people enjoy relaxing around a campfire. To prevent your fire from becoming out of control, you should incorporate a few safety practices. First of all, build your fire away from bushes and trees so that sparks from your fire will not start a forest fire. You will also want to use a circle of rocks to contain your campfire. Do not ever leave your fire unattended. Before leaving your campsite, make sure your campfire has been totally extinguished and that there are no remaining hot embers. Make sure that the cooler you are taking with you is air tight. You do not want your food to spoil because the cooler was allowing the cool air to get out. Store your cooler in a shaded area where the sun will not work against it. This could save your food and your stomach. Camping is fun, and camping with kids can be even more fun, but certain precautions need to be made for these little campers. Take plenty of extra clothes for them, because they will get dirty and wet. It's important they don't stay in wet clothes, because it's possible, it could result in hypothermia. This goes for adults, too. Avoid severe weather when going camping, and pay attention to forecasts. It is horrible trying to pitch a tent in the rain, and not much fun sitting in a tent during a rainstorm. It is equally as disturbing approaching a muddy

campsite and trying to make a weekend out of it.

Do you put a tarp under your tent?

Before you head out for your camping trip, be sure that you take the time to practice setting up your tent. You do not want to get yourself frustrated at the site. Setting the tent up the second time will be much easier than it was the first time around. If you're going camping with a pet, take them for a vet visit beforehand. Inform your veterinarian of where you plan to go camping. Get your pet updated on all their vaccinations and be sure they have protection against ticks, mites, and fleas. You can never be too careful when it comes to the safety of a pet. Plan to save the light of your flashlight before you go camping. It can be really easy to inadvertently press the "on" switch on your flashlight when jostling through a bag of camping equipment. To prevent draining the batteries, place them in your flashlight backwards. If the power switch is touched, the flashlight won't turn on and you'll still have full battery power. Bugs can be a major problem with camping; they can cause disease, get into your food, and just be a nuisance. Take the proper measures to keep them away. This includes not putting on perfume or cologne, lighting citronella candles, avoiding swamp lands, and covering your skin, so they are not attracted to your scent. When you're finished camping and ready to go home, you should pick up after yourself. Keeping nature clean and preserved can allow future campers to enjoy it too. Before you leave, clean up any messes, you've made at your site and try your best to leave nature as you originally found it. The next time you decide to go on a camping trip, don't be fooled by all of the ads and sales jargon by stores and companies. Don't be suckered into breaking the bank in order to buy camping equipment. Use this article to get the reliable and affordable camping equipment you need and have fun.
