

Test Report Website Usability and Consistency

Website: <https://hng.tech/>

Test Date: 29 June 2024

Tools used in Testing:

iOS(Chrome, Safari)

Android(Opera, Chrome)

Web(Chrome, Edge)

Website was tested in both light and dark mode theme setting on all devices.

Objectives:

- Website's consistency in design and content.
- Usability issues and recommended things for improvement.

Test Results:

- Typo/ Grammatical errors: In a few areas, there were typo errors seen.
- Font style: different fonts were used in the website.
- Visual issues: the images on the website are too much and the cloud moving was distracting.
- Text issues: the introductory on the home page is not visible on PC because the text and background colors are the same.
- Non-functional button: some buttons don't work.
- X app is still represented as twitter.

All this was consistent on all devices except the introductory text issue that happens only on PC.

Recommendations

- Non-functional buttons should be removed.
- A specific font style should be used.
- Reduce images on websites.
- Change text color.
- X app should be represented with the appropriate logo.

Conclusion

The website has inconsistencies affecting usability and user experience. When these issues are fixed it will improve user experience.
