

Submission for Bridging SNET AI Services To Unity Apps

Milestone 2

Milestone 2 - Unity Script For Service Discovery	
Status	😬 Not Started
Description	Develop a C# script that enables the discovery of services on the SingularityNET marketplace. This script will list each service with a description pricing information and an endpoint for interaction.
Deliverables	Deliver a video demonstrating the working script along with a complete copy of the code. This will showcase the script's ability to discover and list services effectively.
Budget	\$15,000 USD
Link URL	

Explanation

We've managed to successfully connect Unity to the SNET Marketplace and list services from within a Unity test application. The video demonstrates this code working and shows the list of services along with the necessary data. This is a huge unlock for us and will enable us to proceed with the next milestones.

Video

You can view the video explanation here (apologies for the frame rate, there was an issue while recording): <https://www.youtube.com/watch?v=Xb0U5AQAAQc>
