

Engineering and Technical Services

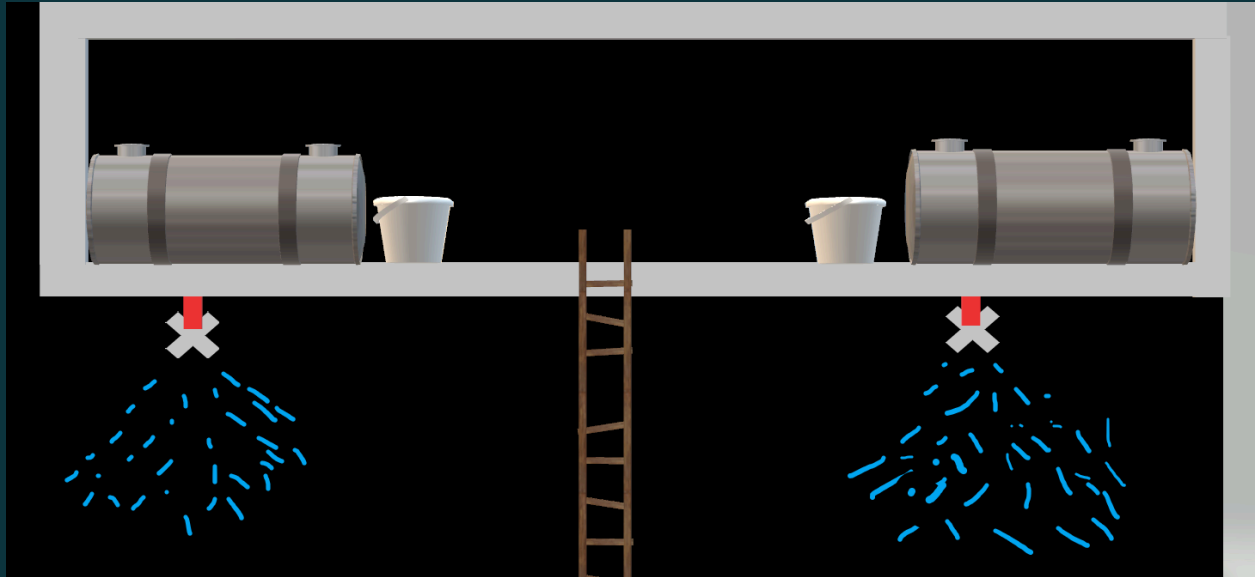

Creative Blueprint #002

Table of contents

1. Basic information
2. Idea information
3. Idea picture
4. Suggestions.
5. Pros and Cons
6. Conclusion

1: Basic information

Name : 22sppeedg2456
Rank : Technical Apprentice
Topic : Make a water replenish system for 457 sprinklers.
Task : Blueprint

(note: I made the all the pictures in this document)

Suggestions

The suggestions to add for this are, Make an extra room on top of Scp-457 camber to hold the water tanks. Add a hose to refill the buckets when they are empty. Another thing is they need to make it so you can interact with the tanks and they have to add a ladder or elevator to get up to the room.

Pros and Cons

Pros: It would make a better roleplay experience.

It would make it more realistic

It would help improve skills for E&TS

Cons: It would make it dangerous for the E&TS member during a breach

It would need to be constantly checked to see if there was water in there just incase of a breach.

Conclusion

The conclusion for this Blueprint is it would make it would make a little bit more roleplay experience and it would make the game more realistic and it would give some of the members new skills. This is why I think this idea should be added.
