

	RIG EMERGENCY RESPONSE PLAN	Date:
		Ref:
		Page 1 of 1

1. PURPOSE

Make sure that the Emergency Response Plans (ERP) is updated for the present rig venue and or locale or, appropriately installed, displayed apparently or communicated through intranet or official means of communication and is complete.

Make sure that each well has an Emergency Response Plan (ERP), which contains simple health, safety and environmental guidelines, and directions for advisory or warning systems in the case of a rig-based emergency. Notification protocols for medical emergencies, fire on the rig or location, gas release or loss of good control, or a security breach should all be included. In most cases, there could be contingency plans in the vicinity for the well that deal with notifications for lengthy-term occasions that include notification of government businesses and outdoor properly manage know-how. These contingencies can be stated in the operating plan however must not complicate the published movement plan.

2. LOCATIONS

Write locations of posted current emergency response plans. This ought to be in significant locations which include the rig doghouse, exchange residence, Rig Supervisor's office, Company Man's workplace, and rig camp. In addition, look that the reaction plan is posted everywhere emergency communications may be made, together with the Rig Supervisor's truck, and the protect shack.

3. CURRENT NUMBERS

Check that numbers for the nearby EMS (Emergency Management System) are shown in large, formidable letters and numbers. Note that some cell telephone systems will direction [911 for the USA] 999 for UAE calls to the emergency machine in which the service is primarily based (probably in an exceptional country).

4. DIRECTIONS

Check that the published plan consists of very clean turn-by-flip instructions that may be studied by the EMS operator. It needs to begin with guidelines from the nearest metropolis and deliver correct mileage, landmarks, turns, road names, etc.

5. LATITUDE/LONGITUDE

Confirm that the latitude and longitude coordinates are posted for possible helicopter operations. Check that a brief description of the specified touchdown area is blanketed for briefing the pilot.

6. DIALING INSTRUCTIONS

Check that clear, simple instructions on a way to use particular emergency radio and satellite telephone systems are posted. The number of the emergency phone should be posted, and someone should remain next to the communication device once a call has been made to provide information to returning calls from responders.
