

Announcement about the start of the Odyssey event, and the release of the first week of cross-chain bridge information. The community is very enthusiastic, but also has many problems:

1. According to the published cross-chain bridge diagram, the official Arbitrum bridge and cex are not included (the official Arbitrum bridge and cex were included in the April article).

2. Do I need to enter the Arbitrum network from the Ethereum mainnet? Or from other networks like zkSync, optimism, etc.

3. Is there an amount limit? And after I cross-chain into the Arbitrum network, I cross-chain out of the Arbitrum network. Just deposit Arbitration Amount > withdraw Arbitration fund to qualify?

4. The content of the #odyssey-faq channel needs to be updated.
