                                                                              0
                                                                                      0
                                                                                          0
```

- 2. Save the file as FEEP.pgm
- 3. Notepad and Windows will insist on putting a hidden ".txt" at the end of the file. This will stop it being opened correctly in Photoshop.
- 4. Open Windows file explorer and go to the folder where you saved your file.
- 5. Press [Alt]+[T] and select "folder options" (as shown below)

6. Now click on "Folder options" and untick the option "Hide extensions for known file types" (shown below)

GCE Computing - Images Task 1

- 7. and rename the extension as FEEP.pgm (removing any .txt extension)
- 8. Open the file in Adobe Photoshop
- 9. Look again at the contents and determine:
 - a. What does the 24 7 signify?
- 10. Using the Internet, what do the P2 and 15 mean?
- 11. Create your own image in Notepad to display your name
- 12. As extension work, re-create the first letter of your name using the PPM standard in glorious colour.
