Mixed Berry Flavor:

Dextrose, Citric Acid, Maltodextrin, Natural Flavor, Colouring Food (Beetroot Red), Magnesium Stearate, FD&C Blue 1 Lake

Blue Bubblegum Flavor:

Dextrose, Maltodextrin, Natural and Artificial Flavors, Magnesium Stearate, FD&C Blue 1 Lake

We are not sure if they will have other colors/flavors, but I did just look on [Amazon](#) and they all have the same varying ingredients, however the dye colors change. Here are some other flavors (not all).

- **Green Apple:** Dextrose, citric acid, and malic acid, maltodextrin, tricalcium phosphate (as an anti-caking agent), artificial and/or natural flavors, and FD&C-approved color additives, typically using Yellow 5 Lake

- **Orange:** Dextrose, citric acid, and malic acid, maltodextrin, tricalcium phosphate (to prevent clumping), artificial flavors, and food coloring FD&C Yellow 6 Lake and orange.

- **Blue Raspberry:** Dextrose, maltodextrin, citric acid, malic acid, tricalcium phosphate (an anti-caking agent), artificial and/or natural flavors, and coloring agents such as FD&C Blue 1 Lake and Blue 2 Lake

Looking online I've found that this candy is allergen-friendly, avoiding common allergens like dairy, eggs, peanuts, and wheat, ensuring it can safely accommodate most students.
