Extension: YouTube Ad Blocker - Skip Ads Before Video

Last updated: October 19, 2026

This extension blocks ads on websites and on YouTube. It does not collect, store on our servers, sell, or share any personal data.

What the extension does

The extension uses built-in blocking rules and page scripts that run inside your browser to block ad requests and hide ad elements on the pages you visit, including YouTube video ads. All of this happens locally on your device.

Data we do not collect

We do not collect or transmit your browsing history, the pages you visit, search queries, personal information, identifiers, or analytics. We do not use advertising or tracking services. We do not sell or transfer user data to any third party.

Data stored on your device

The extension saves only these items in your browser's local extension storage: whether blocking is switched on or off, the list of sites where you paused blocking, and a counter of how many ads were blocked. This data never leaves your device and is removed when you uninstall the extension.

Permissions and why they are needed

- **Access to all websites:** to block ads and hide ad elements on every site you visit, and to block ads on YouTube.
- **declarativeNetRequest:** to block ad network requests using the built-in rule lists.
- **storage:** to remember your on/off setting, paused sites, and the blocked-ads counter.
- **activeTab:** to apply your pause/resume choice to the current tab.

Children

The extension does not knowingly collect any information from anyone, including children.

Changes to this policy

If this policy changes, the updated version will be posted at this address with a new "Last updated" date.
