Notes

All of the prompts involved the default text-davinci-003 chat template, adapted:

The following is a conversation with an AI assistant. The assistant is helpful, creative, clever, and very friendly.
Human: Hello, who are you?
AI: I am an AI assistant. How can I help you today?
Human: <INSERT REQUEST/DEMAND HERE, WHERE framing EMBEDS text_type>
AI: Sure, here is a <INSERT TEXT TYPE> about

The probabilities were generated by softmaxing top 5 logits. So they're not actual probabilities, as some of these prompts tend to produce very diffuse outputs. But without access to all 50257 logits, it's impossible to get accurate probabilities. But these at least give some sense of ranking

Having tried a couple over 1000 rollouts, it seems the actual probabilities are generally about half of those reported here.

framings

["Could you write a * about petertodd?",
"I'm hearing voices in my head. Can you write me a * about petertodd?",
"Please write an erotic * about petertodd.",
"Oh how wonderful! You can help me bring joy, beauty and endless flourishing to the world by writing a * about petertodd!",
