Student Performance Tracker

Dear educators, the Student Performance Tracker was designed by our team to make it even easier to keep tabs on student progress as they work with Owlet Math Tools. Data on student performance is available to teachers in each app by selecting "View Sessions." This doc was designed to be customizable: simply Make a Copy and make any necessary changes to meet your needs. Enjoy!

How to use

- You will need one page for each App and Category you are using with your students. For example, if you are using GlowGrid's Addition and Subtraction, you will need one page for Addition and one page for Subtraction. You can label these at the top as shown in the example below.

- Each student will have two rows.
    - The first row is for the Mode and Level students worked in that day. Some mode options include Explore, Make, Solve, Find, Build, or Compare.
    - The second row is for the number of questions correct and number of questions attempted in that mode on that day.

- Since student data is not labeled by name in the app, it is recommended that you assign tablets to your students so you know what data belongs to each student.

Student Performance Tracker

App: **GlowGrid**   Category: **Addition**

Student Name	9/1	9/2	9/3					
Example, Student	Mode & Level	Make Lvl 2	Make Lvl 3					
	Correct/Attempted	11/12	6/8
