

Should Single-Use Plastics Be Eliminated?

Imagine a world where you go to the beaches and see a graveyard of dead animals choked by plastic. It is unimaginable that so many people still use plastic. Because single-use plastic is produced from fossil fuels, extracting and creating these plastics emits vast amounts of greenhouse gases, it also takes a long time to break down and animals deserve some respect.

It is estimated that just the extraction of these fossil fuels and their transportation to plastic factories emits 1.5 to 12.5 million metric tons of greenhouse gases. How dare humanity do this to so many marine creatures still living? How much longer can we ignore the dying animals in the oceans? Greenhouse gas traps the sun's heat and acts like a blanket covering the earth. It means that the sun's heat travels inside earth and does not come back out. Just single - use plastic can cause animals dying and even worse create greenhouse gases.

Single-use plastic, whether from lunch wrap or bags, takes anywhere from 20 to 1,000 years to break down or never. That's a lot of years spent wrecking havoc on the environment, where not only can it look unsightly, but can also harm or maim animals. Do you want to go to the beach to be greeted by the sight of plastic polluting the ocean? How can we do this to our sons and daughters? Our ancestors preserved this land for a long time, but what we did in return is surprisingly bad.

The sun beamed down from above, casting its warm, protective glow as if it welcomed us into its realm. Tiny grains of sand, bathed in the sun's gentle light, seemed to hum a beachy melody that resonated deep within our soul. Along the shoreline, the mighty ocean waves stood like majestic kings, their frothy crests kissing the golden sands beneath. The sand itself displayed a soft, delicate shade of yellow, quietly stealing the spotlight as the true star of this scene, the destination beyond the walls of hope and longing. Twisting seaweed, as green as summer foliage, danced gracefully in the crystal-clear waters, sharing secrets only the sea could understand. Towering grass whispered secrets to each other, their presence unnoticed by most, except for us. This beautiful sight has been eliminated for our future generations but has been experienced by us.

Additionally, all creatures deserve respect and protection. By boycotting companies that persist in using plastic bags and engaging in activism for sustainable practices, we can drive meaningful change, ensuring a safer environment for all beings.

As we venture into the expansive realm of digital innovation, brimming with untapped potential, it is imperative to consider the grave repercussions our actions, particularly the usage of plastic bags, have on the natural world. The sight of marine life, such as turtles, dolphins, and jellyfish, suffering due to plastic entanglement or ingestion, presents a stark reminder of our ethical obligations.
