

Mobile Hearing Aid

Hear More, Miss Less, Turn World in Full Volume!

The Mobile Hearing Aid app is designed to help people with hearing loss or impairment to communicate more effectively and comfortably in various situations. We tried to collect in one app the most important things for caring for your hearing.

❖ Hearing Test

Mobile Hearing Test can measure how well you hear different sounds and frequencies using your smartphone. You can also compare your results with the average hearing levels for your age group. A mobile hearing test can help you identify any signs of hearing loss and give you recommendations on what to do next.

❖ Hearing Aid

Mobile Hearing Aid with speech recognition can help people with hearing loss to communicate better in different situations. It can amplify the sounds that the user wants to hear, and filter out the noises that they don't. It can also recognize the speech of the user and others, and display it as text on a screen. This way, the user can read what is being said.

❖ Audio Reader

You can use Reader to enhance audio and create transcripts of your favorite audiobooks and podcasts. Enjoy them in a new way! It is a great tool for education, entertainment and accessibility.

ATTENTION!

Mobile Hearing Aid app is not a replacement for a professional hearing evaluation and diagnosis. Therefore, it is important to consult with an audiologist before using a mobile hearing aid app and to follow their recommendations for proper use and maintenance.
