

JOURNALING & HUDSON RIVER ALMANAC ENTRY -

*How do we learn about the environment? **We observe!***

The power of observation play an important role in science and Earth systems. Direct observation and careful description helps us compare species, habitats, and different geographical regions.

1. Close your eyes and listen to the environment: What can you hear? What do you smell? What does the weather feel like (i.e. humid, dry, cold, wet, windy)?
2. Open your eyes: What do you see that surprises you?
3. What do you think might have affected your data collection today?
4. Or use your creative expression and draw a picture that tells the story of your environment.
