

ALICE input for the Friday (10 February 2017) meeting on MonALISA

1. Repository:
 - Source code hosting location
 - Will it be also moved to GIT?
 - Access rights - egroups / GitLAB?
 - Workflow
2. MonALISA builds
 - Who will compile and package the various services (Proxy, Service, Repository, GUI, MLSensor)
 - Service auto-updates deployment
3. Proxy services
 - Currently three active instances: *monalisa.caltech.edu*, *monalisa.cacr.caltech.edu*, *aliendb1.cern.ch* (lost *monalisa.cern.ch*)
 - Do we envision running it in the Online environment without GPN access?
4. LUS
 - 2 instances: *monalisa.cern.ch*, *monalisa.cacr.caltech.edu*
 - ALICE wants to run an instance of it as well and volunteers the in-house Grid servers for the service
 - If Online requires an isolated environment (no GPN), a service may be warranted as well
5. Other services
 - topology service not working
 - <http://monalisa.cern.ch> sometimes unresponsive and GUI cannot be started from it
6. Spare server
 - a Supermicro server is waiting in our server room, prepared as replacement for *monalisa.cern.ch* at some point
7. Organisational
 - Mailing lists for support and announcements
