Rubric - Make a Recommendation
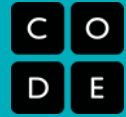

Project-Specific Rubric

Criteria	Yes/No	Comments
The problem is well-defined, including a question that the recommender will answer and four possible answers.		
The data to be collected is clearly identified, including what kind of information it is and what choices the respondents will have.		
A survey is designed to collect the needed data in a form that can be used to help solve the problem.		
The data is analyzed using cross tabulation, and relevant conclusions are drawn from the relationships between the types of data.		
The rules in the algorithm relate back to the results and conclusions drawn from the cross tabulation.		
The algorithm is tested at least three times, and any feedback from the users is taken into consideration.		
The peer review provides useful and constructive feedback.		
Peer review feedback has clearly been incorporated into the final version of the project.		
The presentation includes all required information
