

This presentation is all about gentrification and urban regeneration- two key processes that we learn about in geography. Link: https://www.rgs.org/schools/teaching-resources/urban-gentrification/

This is a lecture for A-Level students but it takes you beyond the specification and is particularly useful for anyone aiming for a top grade or thinking of studying geography at University.

Take your time watching this video! Professor Lees covers a lot of information so you will need to pause the recording regularly.

As you watch, please make your own notes but use the questions below to provide guidance on what you should be focusing on. As a minimum, the questions below should have been answered:

1. What is urban gentrification? What are the core elements of the process?
2. How is gentrification different to urban regeneration?
3. Why do geographers study gentrification? Why are we interested in it?
   (Write this answer in your own words and using Professor Lee's explanation- do not copy the slide!)

4. How has the process of gentrification changed over time?
5. Who tends to be behind gentrification now? Pioneers or developments and governments?
6. What types of places does gentrification tend to impact?

7. How does gentrification impact a place?
8. What is super gentrification? And what is hyper-gentrification?
9. What is studentification?

10. What key group has long been associated with gentrification?
11. What are the key differences between gentrification in the global north and the global south?
    (This question needs an extended answer!)

12. What has happened in China? What is the government trying to do here?
13. Why has resistance to gentrification increased? (This question needs an extended answer!)

14. To conclude, write 150 words of your own thoughts on gentrification. You can focus on any element that Professor Lees discussed.
