

# **Code Combat**

Code combat is a coding game. It helps you improve your learning skills and your typing skills for coding.

You can make your own clans and I think you can work together and defeat levels together. You need a class code so you can play as a class and the teachers can help other students in the class.

You need to get diamonds to get gear, and get more health in the level, (if it has orgs) so you need swords to defeat orgs. (and to defeat the level to)

YOU NEED TO FINISH LEVELS TO GET DIAMONDS SO YOU CAN GET GEAR FROM THE SHOPS!!!

And to get more health in a level from the last paragraph and in the Introduction (from orgs so you need swords to defeat orgs)

You might need a device that has a keyboard to play this game because it is typing code as i said in the Introduction reader.

I think that codecombat it is a game learning game for school for school.
