

MindSpark is the Regional Partner for Code.org in Colorado. We have served over 4,000 K-12 educators in professional learning with Code.org programs. This summer, we are hosting our secondary week-long professional learning in-person! We are excited to bring together cohorts of educators looking to increase their skills and improve access and opportunities for students in computer science.

The workshops provide high-quality professional development from an experienced computer science facilitator and educator local to Colorado. It offers year-round support as well. The programs kick off with a 5-day summer workshop where you'll have an opportunity to work hands-on with the curriculum and meet other teachers. Throughout the year, there is online support for upcoming units, forum support, and four 1-day quarterly workshops you can attend. You don't need any prior computer science experience to get started.

Workshop Dates: Monday, June 16th - Friday, June 20nd (9:00am - 4:00pm daily)

Workshop Location: 13949 West Colfax Avenue, Lakewood, Colorado 80401, United States

Apply Here: [Click here](#)

- Scholarships available for those who meet these priorities:
 - Have not participated in the program before
 - 40%+ high needs student population (FRL and/or URG) or considered a rural school
