

Ekliptika Jurnal Inovasi Teknologi Berkelanjutan

Vol. xx No. [diisi redaksi] [bulan tahun] | Hal. [awal-akhir] | [e-ISSN 2809-6371](#) [p-ISSN 2721-5105](#)

DOI: <https://doi.org/10.55757/ekliptika.xxxxx.xxxx>

[Article Title in No More Than 20 Words]

[Full name of author 1]^{1*}, [Full name of author 2]², [Full name of author 3]³

¹[Department, institution, address, city, country]

²[Department, institution, address, city, country]

³[Department, institution, address, city, country]

*Corresponding author: [name and email address]

Received: [date]; First revision: [date]; Second revision: [if any]; Accepted: [date]. Completed by the editorial office.

Abstrak

[Write the Indonesian abstract in one paragraph of no more than 200 words: background, objective, method, specific principal findings, and conclusion. Use Cambria 11 pt and single spacing. Avoid citations, tables, equations, unexplained abbreviations, and unsupported claims. Keep both versions consistent.]

Kata kunci: [3–5 Indonesian terms in alphabetical order; separated by semicolons]

Abstract

[Write one paragraph of no more than 200 words: background, objective, method, specific principal findings, and conclusion. Use Cambria 11 pt, italics, and single spacing. Avoid citations, tables, equations, unexplained abbreviations, and unsupported claims. Keep both versions consistent.]

Keywords: [3–5 terms in alphabetical order; separated by semicolons]

Using this template

Delete all instructions and examples before submission. Prepare an anonymous manuscript and separate author details. The editorial office completes issue metadata, DOI, and editorial dates.

INTRODUCTION

Explain the background, evidence of the problem, previous studies, research gap, contribution, and explicit objective. Each citation must support its statement. Explain relevance to sustainable technology through the problem and findings. Adapt the structure to research articles, literature reviews, case studies, or technical notes.

Use A4 paper, one column, Cambria 11 pt, single spacing, and justified body text. Set mirrored margins: top/inside 3 cm, bottom/outside 2.5 cm. Use 14 pt for the title (maximum 20 words), 11 pt for names without academic titles, and 10 pt for affiliations. Research articles and literature reviews should target 5,000–7,000 words, including abstracts and references; consult the editor on other types. Anonymize the review manuscript, including text, headers, filename, and properties. Submit identities separately and complete OJS metadata.

METHODS

Describe the research design and procedures in enough detail to permit assessment and replication. Summarize previously published methods with appropriate citations; mark direct quotations and identify their sources. Explain modifications, assumptions, and validation procedures.

Report the location and period, study object or sample, data sources, materials, equipment, variables, replicates, sampling, measurements, and analysis. Explain validity, reliability, assumptions, and software where relevant. For modeling or optimization, describe the objective function, constraints, parameters, and validation. For literature reviews, report search sources and dates, keywords, selection criteria, and synthesis. For case studies or technical notes, explain the context, implementation, and evaluation.

Where required, report the actual ethics approval, permissions, and participant consent. Protect identities and sensitive data. Do not copy approval numbers or institutional names from template examples.

Create editable equations using Word Equation, align them to the left, and number them consecutively in parentheses on the right, including equations in appendices. Leave sufficient space above and below each equation and explain its symbols and units. The following equation illustrates formatting only.

$$\frac{a}{b} \times \frac{c}{d} = \frac{ac}{bd} \quad (1)$$

If many symbols are used, include a nomenclature section after the references. Otherwise, delete the nomenclature section and its example symbols.

Section and Subsection Headings

Use bold Cambria 11 pt, left aligned, for section headings. Organize sections according to the manuscript type and journal guidelines.

Subsections

Use bold Cambria 11 pt for subsection headings. Maintain a consistent hierarchy and avoid unnecessary heading levels.

Numbering

Use numbered lists when the content requires a sequence. Use only the levels needed and apply them consistently.

The available numbering levels are as follows:

1., 2., 3. — first level

a., b., c. — second level

i., ii., iii. — third level

(1), (2), (3) — fourth level

(a), (b), (c) — fifth level

(i), (ii), (iii) — sixth level

Indent each numbering level by 0.25 cm relative to the preceding level.

RESULTS AND DISCUSSION

Present results systematically according to the objectives and analysis, beginning with important findings. Summarize the main patterns without repeating every table entry or figure value. Report units, observation counts, uncertainty measures, and test results where relevant. Include findings that do not support the initial hypothesis.

Explain limitations, uncertainty, and unresolved questions as a basis for further research. Present the main data in appropriately sized tables or figures. Detailed data may be supplied as supplementary files or deposited in a repository subject to ethical and access restrictions. Do not withhold data needed to assess the findings.

Relate the findings to theories or hypotheses and previous studies. Explain contributions, theoretical and practical implications, and limits of applicability. Claims of environmental benefits, efficiency, or sustainability must be supported by data and stated assumptions.

Tables

Place table titles above tables and figure captions below figures. Number tables and figures separately in the order in which they are mentioned in the text. Align tables, figures, captions, and equations to the left.

Table 1. [Concise and informative table title]

xxxxxxx	xxxxxxx	xxxx	xxxx
A	AA	a	AA
		b	AB
		c	AC
	AAAA	d	AD
		e	AE
		f	AF
B		g	AH
		h	AJ
		i	AK

Create editable tables using the Word table feature. Use legible text and clear units. When adapting a table, provide the source citation and permission where required below the table. Source notes must remain readable.

Figures

Submit graphs, diagrams, line drawings, screenshots, and photographs in digital form. All figures must be clear, legible, and of high quality, with consecutive Arabic numbering. Color figures may be used for online publication.

Provide figures created in MS Word, MS PowerPoint, or MS Excel in their original editable format. Export figures made in other applications at adequate quality and insert them into this Word template. Insert high quality photographs directly into the main manuscript.

Use adequate resolution, legible labels, and proportionate figure sizes. Identify sources or permissions for third-party material where required. Place captions below figures and align them to the left. The following image illustrates placement only; replace it with a research figure and check usage rights.

Figure 1. [Figure title and source or permission where required]

CONCLUSION

Answer the research objectives directly using the findings already reported. Explain contributions to the field and sustainability implications where relevant. Recommendations must be specific and take the study limitations into account.

Do not introduce additional discussion, repeat the abstract, or merely list the results. Write the conclusion in complete paragraphs rather than bullet points.

Editorial production: page numbers are centered; start on an odd page and end on an even page, continuing from the preceding article. The editorial office sets volume, issue, dates, and DOI, and checks headers and footers. The Crossmark image in this template illustrates placement. The editorial office activates its status link after the policy and article metadata have been registered and the link works.

ACKNOWLEDGMENTS

Acknowledge people who helped but do not meet authorship criteria, briefly stating their roles and obtaining their consent to be named. Distinguish acknowledgments from author contributions. All authors must approve the content, author order, and submission.

Complete the six statements below accurately before the references. Replace every bracketed field with a complete statement. The box expands automatically when filled.

Describe author contributions using CRediT roles where appropriate. CRediT clarifies contributions but does not replace authorship eligibility criteria.

Data availability and conflict of interest statements are mandatory. A data availability statement does not require disclosure of confidential or sensitive data.

Report ethics approval, permissions, and participant consent where required. Explain why they are not applicable where appropriate. Do not invent or copy approval numbers. Protect personal and sensitive data.

Disclose funding organizations, grant numbers where available, and the role of funders. Clearly state when no specific funding was received. If AI was used, disclose the tool, version if available, purpose, tasks assisted, and verification performed by the authors.

AUTHOR STATEMENTS

Author contributions: [name each author and their actual CRediT roles].

Data availability: [repository/DOI, access procedure, or justified restrictions].

Ethics approval and consent: [body, approval number, date and consent; or explain why not applicable].

Conflicts of interest: [disclose relevant relationships; or declare none].

Funding: [funder, grant number and role; or state no specific funding].

Use of AI: [tool/version, purpose, tasks assisted and human verification, if used].

Replace these fields with complete statements before submission.

REFERENCES

Include at least 15 relevant references that are actually cited. Prioritize primary research and recent sources suited to the topic; books, standards, and foundational methods may be included where needed. There is no required quota of citations to Ekliptika. A reference manager such as Mendeley may help maintain consistency.

Verify authors, titles, years, publishers, pages, and DOIs or URLs. Every reference must be cited and every citation must have a matching reference. Apply IEEE numbering in order of first appearance and reuse the number for subsequent citations. Order references numerically, not alphabetically. Remove duplicates and sources that do not support the statement.

Use IEEE style. The following is a format placeholder rather than a real source; replace it with verified metadata: [1] [Author initials and surname], "[Article title]," [Journal name], vol. [volume], no. [issue], pp. [pages] or Art. no. [article number], [year], doi: [verified DOI].

NOMENCLATURE

Define the symbols and units used. Delete this section if it is unnecessary. Example entries:

a : [meaning of symbol a and unit]

b : [meaning of symbol b and unit]

c : [meaning of symbol c and unit]

Artificial Intelligence Policy

AI may assist writing in accordance with journal policy. Authors remain responsible for the accuracy of data, analysis, originality, references, and confidentiality. AI cannot be listed as an author and must not be used to fabricate data, findings, ethics approval, or sources.

If AI was used, disclose the tool, version if available, purpose, tasks assisted, and human verification in a separate statement before the references. Reviewers are prohibited from using AI in the peer review process. Editors must follow the journal's disclosure and confidentiality requirements.

Plagiarism Policy

A similarity score of 20% is an initial screening reference, not an automatic rejection threshold. Editors assess sources, quotations, context, and the nature of the findings, and request clarification where needed. Actions are based on substantive findings under the journal's plagiarism screening policy.

Open Access Policy

Articles are openly available without access charges. Authors retain copyright and grant the journal non-exclusive permission to publish. Published articles are licensed under Creative Commons Attribution–ShareAlike 4.0 International (CC BY-SA 4.0).

Publication Ethics Policy

Research must be conducted ethically. Report approval from the competent body, permissions, and participant consent where required. Explain why these requirements are not applicable where appropriate. Every article must include a conflict of interest statement, including a declaration of no conflicts when accurate. The editorial office may request evidence and clarification.

SUBMISSION PREPARATION

Submit through OJS and complete all author, title, abstract, and keyword metadata. Declare that the manuscript is original and is not under review at another journal. Disclose any preprint and its version/link; a preprint must be distinguished from prior journal publication. Upload supporting files and, for revisions, a response to each editorial or reviewer comment. For anonymous review, use Author 1, Author 2, and so on in contribution statements. Provide full identities and other identifying disclosures separately to the editorial office; retain the information needed to assess the research. Restore the full statements before publication.

TEMPLATE REFERENCES

The following sources guide this template; they are not research references that must be cited in an article. Remove the policy instructions and template references before submission.
