# Pinstripes
nPs or PsPs

- Pinstripes are long horizontal stripes that run along the body.
- They are always black or darker than the base.
- Pinstripes can look similar to the Silverfish marking, but Pinstripes will never have spots like silverfish does.
- The stripes are always natural looking.

General Pinstripes:

Min and Max Stripe Thickness:
- They will not be really thin and really thick on the same Sindow! This is just showing the difference. They are always the same general thickness on the same sindow.

DENSITY:

Sparse:
The Stripes are shorter and there are generally 2-10 shown on the body

Low:
Stripes are longer, yet there are still some really short stripes. There are generally 2-3 longer stripes and several shorter stripes.

Normal:
Stripes are long and equal. Shorter stripes are kept towards the underside

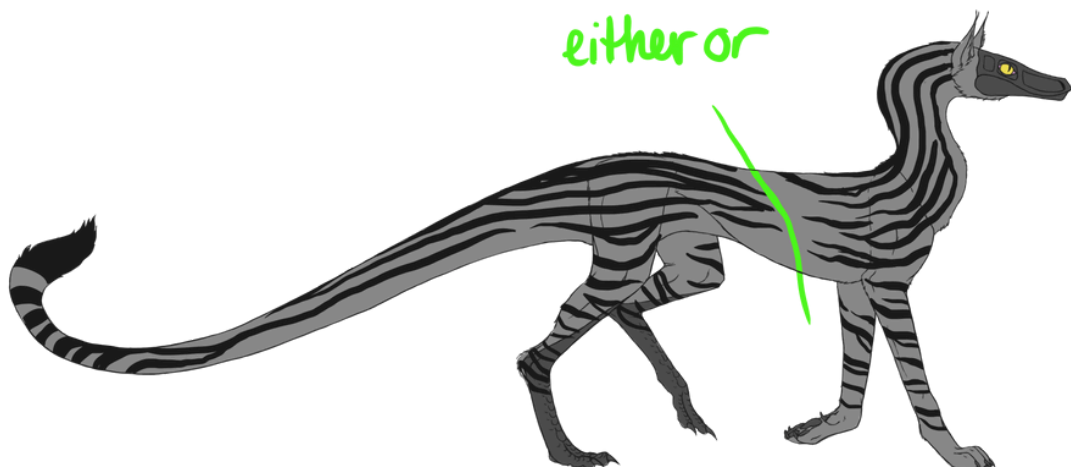

Dense:
Stripes are longer, there are rarely any short stripes. Stripes are also squished together.

SPREAD:

Capped:

either or

Topline:
Stripes do not extend below the elbow or knee and they do not extend too much past the base of the tail.
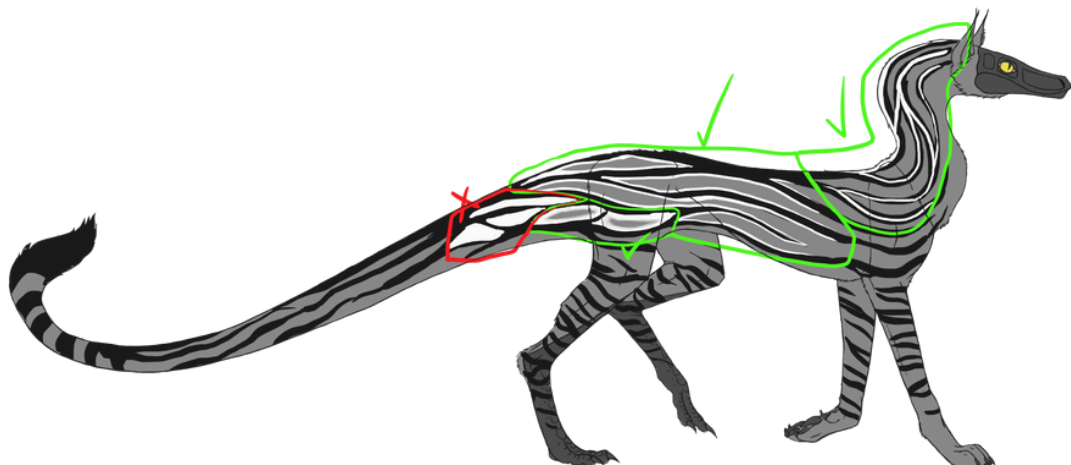

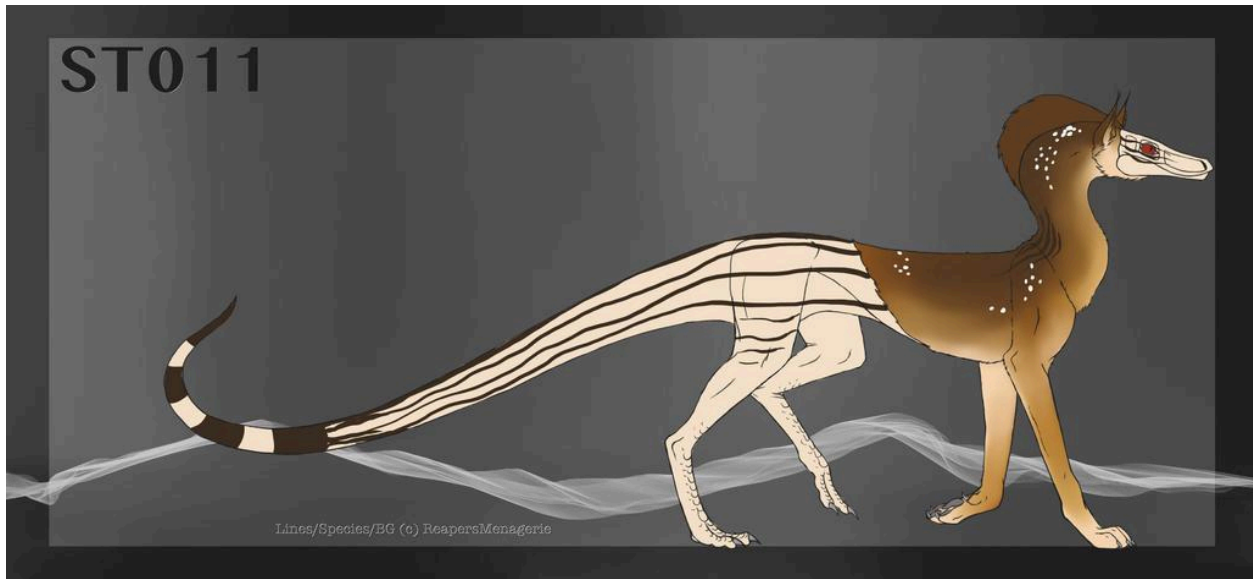

Fullbody:

Tipped:

Pinstripes with Secondary:

- Secondary can fill the stripes
- secondary can outline the stripes
- The secondary can also outline the inside and blend with the base, but it WILL NOT fill the whole area. The base color must be showing through and the secondary cannot be blended into it so thoroughly that if I were to colorpick the center, that it would not be the same as the base.

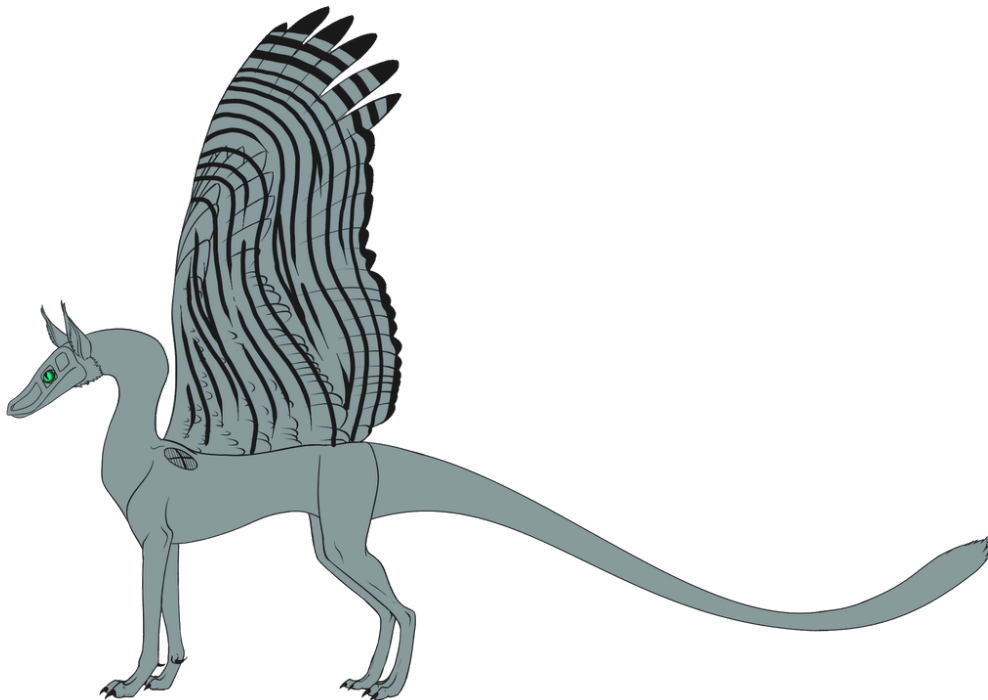

VARIANT EXPRESSION

- His stripes are spaced out a little more, but they'll look normal

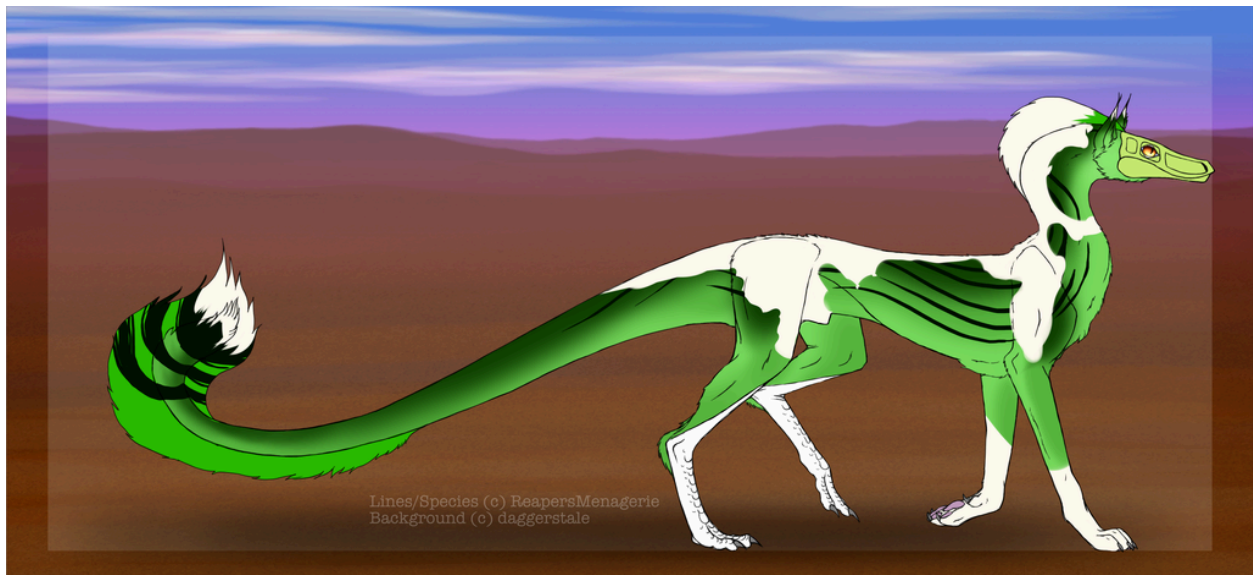

WITH WINGS:
- Marble does not have to show on the wings at all. If it does, below is a generalized max of how much it can show.
- It does not have to follow spread and density rules. However, if you'd like a more cohesive design, you should

GROUP EXAMPLES:

Green Pinstripe Tobiano

Sooty Green Pinstripes Tobiano

Red Pinstripes (3/0

Red Wild Siam Roan with Pinstripes and Tobiano [2/0]
