

HOW TO CHANGE TATTOO EMISSIVE COLOR

Hiiii! So I made glowing tattoos but I was not sure the process of the glow would be in so!

In case you have to do it yourself here is how with as many pictures I could.

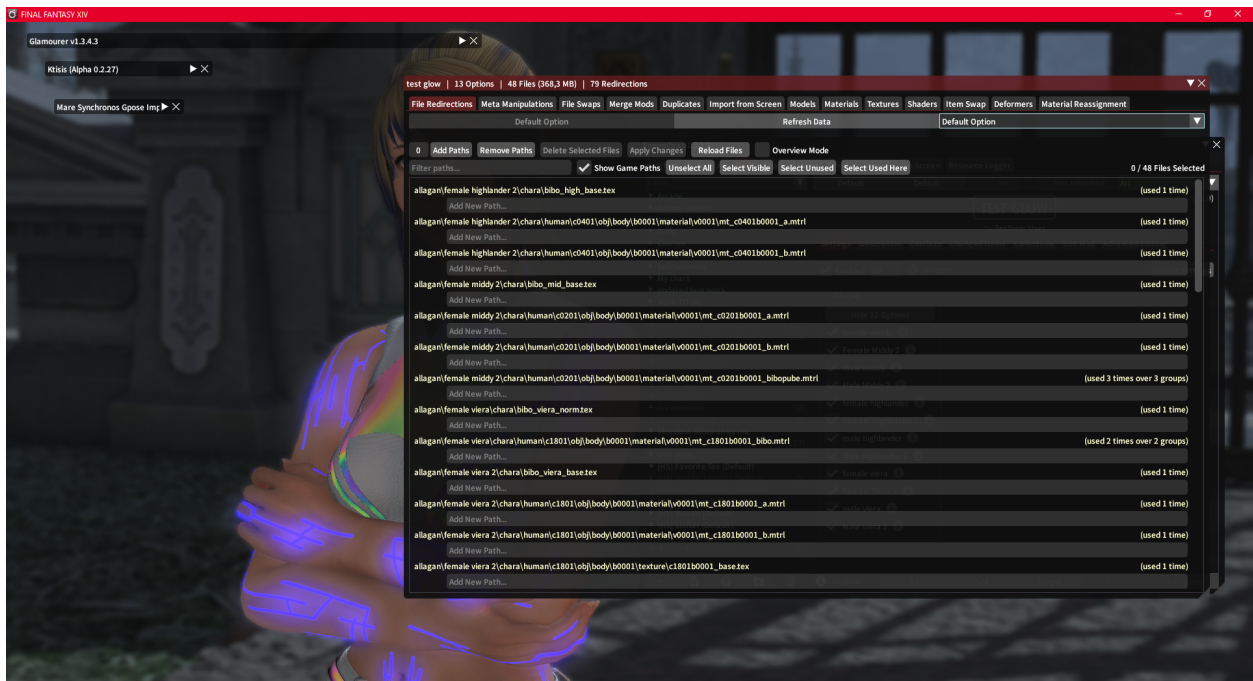

Of course our journey starts in penumbra.

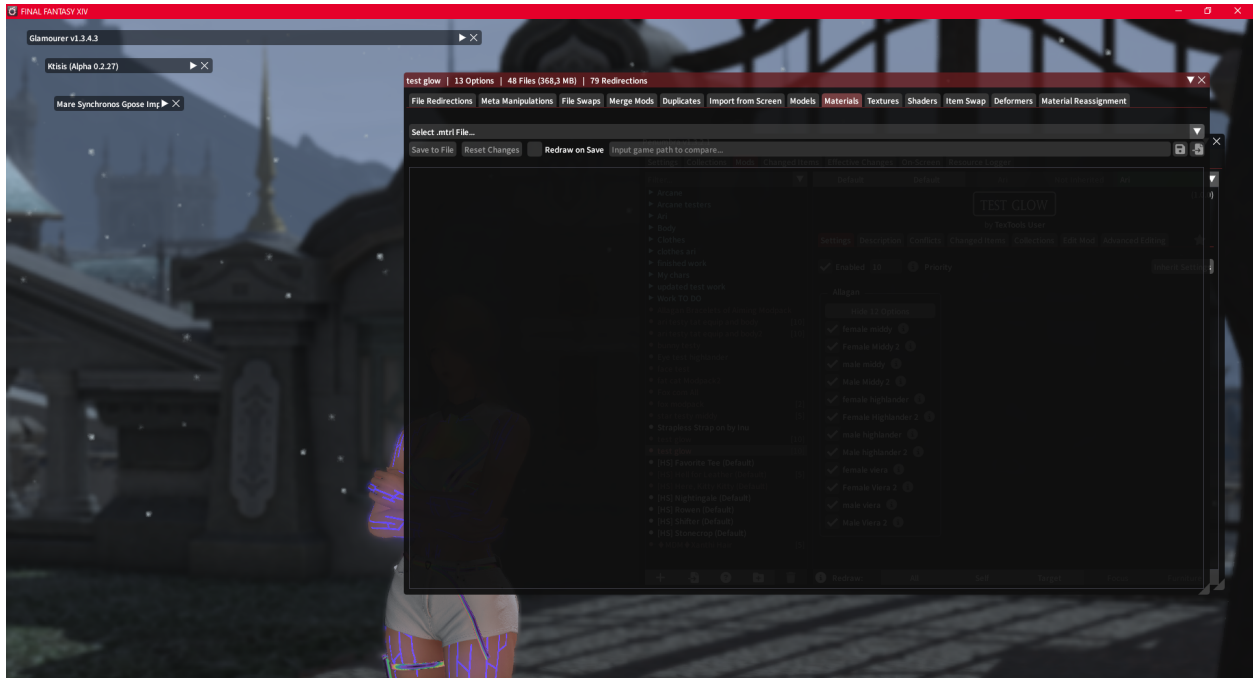

On the modpack of the mods, please select Advance Editing.

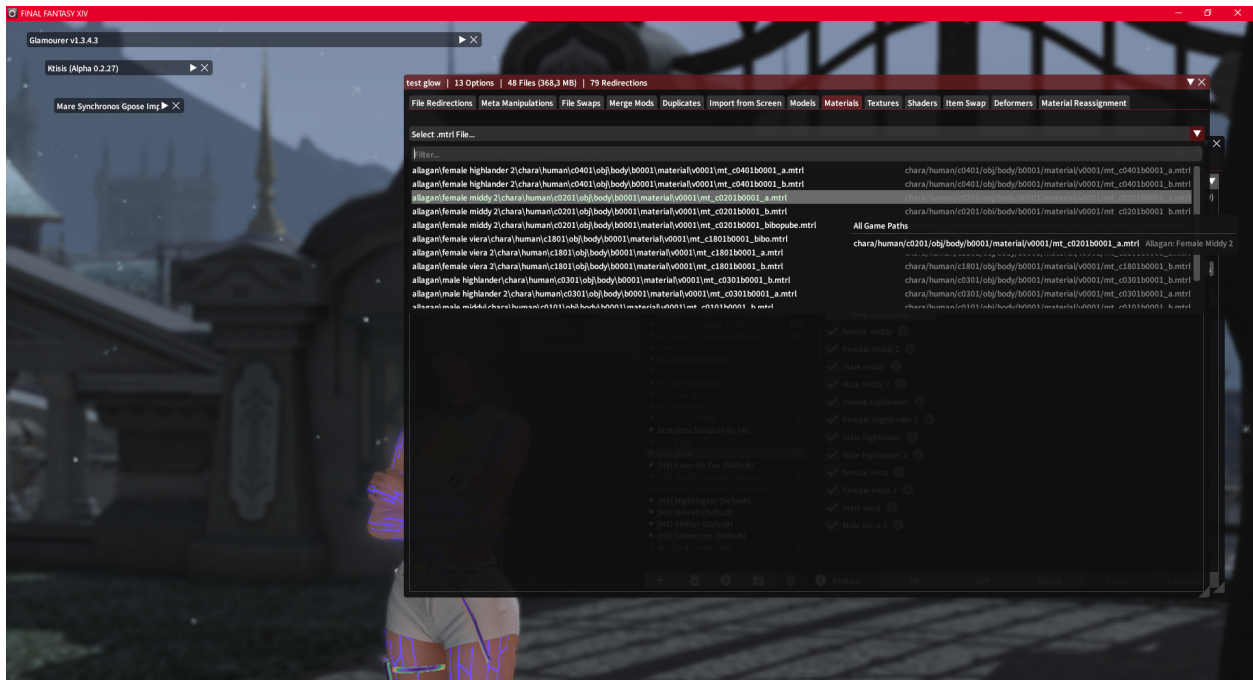

This is what opens.

Go to the Material Tab.

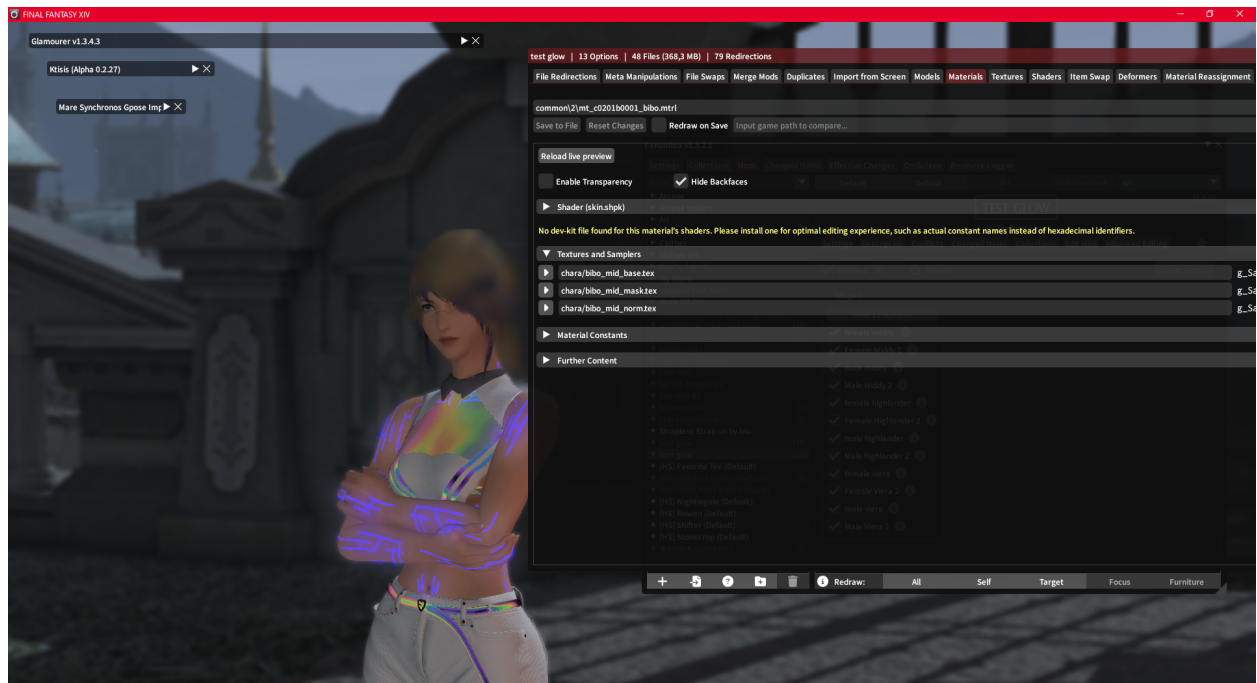

In the dropbox select your body. Now thankfully, GREEN are the one equipped right now. Careful though! As you see here I have a material and it ends with `_a.mtrl`. This means it is material A. You don't want that.

Here You have _bibo.mtrl. If it is a male body it will be _b.mtrl. You need dis. Select it.

Then below you have multiple tabs. The one interesting is Material Constants.

Ta daaaaaa! It opens various color things, and you want to go to Emissive Color. As you see here mine is already set to blue.

Change the color! There ya go! :D Have fun!
