Overview

Learning Objectives

At the end of this course, learners will be able to:

- Define the four non-relational database types.
- Identify the structure and strengths of each of the four types: key-value, graph, column oriented, and document.

Suggested Uses

- Part of one lecture period
- Handouts / asynchronous learning
- Supplemental reading material - read on your own / not part of formal teaching
- Complement to University course [M001: MongoDB Basics](#)

This lesson is a part of the course [Introduction to Modern Databases with MongoDB](#).

At a Glance

Length:
15 minutes

Level:
Foundational

Prerequisites:
[Relational vs. Non-Relational Databases](#)

Non-Relational Database Types

Key/Value

Graph

Column

Document

Structure

- A unique key is paired with a collection of values, where the values can be anything from a string to a large binary object.

Strength

- Simple data model.

Key/Value Database

Key/Value: Example

Key	Value
Name	Sherlock Holmes
Age	40
Address	221B Baker Street

Structure

- Captures connected data.
- Each element is stored as a node.
- Connections between nodes are called links or relationships.

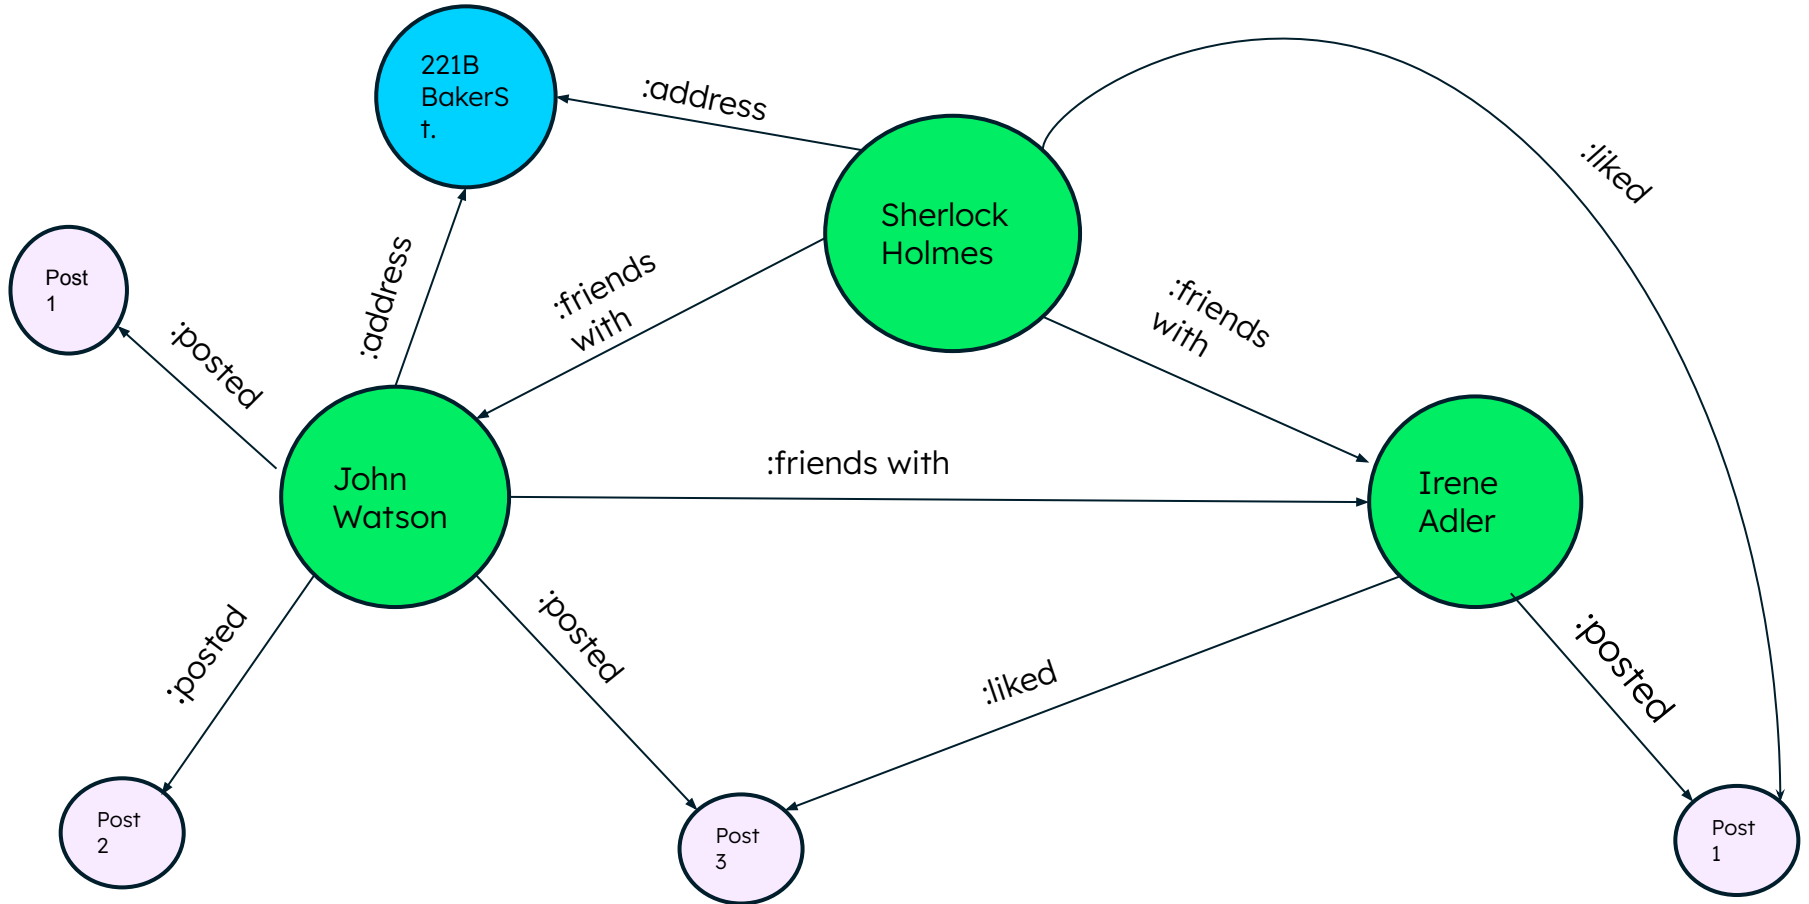

Strength

- Traverses the connections between data rapidly.

Graph Database

Graph: Example

Structure

- Data is stored using key rows that can be associated with one or more dynamic columns

Strengths

- Highly performant queries
- Designed for analytics

Column Oriented
or Wide Column

Column Oriented Example

Name	ID
Sherlock	001
John	002
Irene	003

Age	ID
40	001
45	002
43	003

Height	ID
6'2	001
5'9	002
5'7	003

Structure

- Polymorphic data models
- Each document contains markup that identifies fields and values.

Strengths

- Obvious relationships using embedded arrays and documents
- No complex mapping

Document Database

Document Model Example

```
{
  "_id":
  ObjectId("5ef2d4b45b7f11b6d7a"
),
  "user_id": "Sherlock
Holmes",
  "age": 40,
  "address":
  {
    "Country": "England"
    "City": "London",
    "Street": "221B Baker
St."
  },
  "Hobbies":[ violin,
crime-solving ]
}
```

```
{
  "_id":
  ObjectId("6ef8d4b32c9f12b6d4a")
,
  "user_id": "John Watson",
  "age": 45,
  "address":
  {
    "Country": "England"
    "City": "London",
    "Street": "221B Baker
St."
  },
  "Medical license": "Active"
}
```

The Document Model

For **general purpose** use, the document model prevails as the preferred model by developers and database administrators.

Quiz

Quiz

Which of the following are types of non-relational databases? More than one answer choice can be correct.

- A. Key/Value
- B. Graph
- C. Column-oriented or wide-column
- D. Document
- E. Data Lake

Quiz

Which of the following are types of non-relational databases? More than one answer choice can be correct.

- A. Key/Value
- B. Graph
- C. Column-oriented or wide-column
- D. Document
- E. Data Lake

Quiz

Which of the following are types of non-relational databases? More than one answer choice can be correct.

- ✓ A. Key-Value
- ✓ B. Graph
- ✓ C. Column-oriented or wide-column
- ✓ D. Document
- ✗ E. Data Lake

A key-value database is regarded as a non-relational database.

Quiz

Which of the following are types of non-relational databases? More than one answer choice can be correct.

- ✓ A. Key-Value
- ✓ B. Graph
- ✓ C. Column-oriented or wide-column
- ✓ D. Document
- ✗ E. Data Lake

A graph database is regarded as a non-relational database.

Quiz

Which of the following are types of non-relational databases? More than one answer choice can be correct.

- ✓ A. Key-Value
- ✓ B. Graph
- ✓ C. Column-oriented or wide-column
- ✓ D. Document
- ✗ E. Data Lake

A column-oriented or wide-column database is regarded as a non-relational database.

Quiz

Which of the following are types of non-relational databases? More than one answer choice can be correct.

- ✓ A. Key-Value
- ✓ B. Graph
- ✓ C. Column-oriented or wide-column
- ✓ D. Document
- ✗ E. Data Lake

A document database is regarded as a non-relational database.

Quiz

Which of the following are types of non-relational databases? More than one answer choice can be correct.

- ✓ A. Key-Value
- ✓ B. Graph
- ✓ C. Column-oriented or wide-column
- ✓ D. Document
- ✗ E. Data Lake

A data lake is regarded as a centralised repository of data, both structured and unstructured so it is not regarded as non-relational or as relational.
