Mayor's Blockchain Challenge

5-Minute Pitch

Transmute | 07/29/2018

Meet Transmute

Orie / Sheel / Margo

2

The Problem

(Why are we here?)

People Experiencing Homelessness

“Documents are stolen like that!”
“I’m fighting for benefits”
“Opportunities for resources are rare”
“The run-around breaks trust”
“We are treated like an underclass”

Service Providers

“I need to feel the seal”
“You need to prove you who are”
“Sharing between organizations is complicated”
“I have to be able to trust it is verified”

1. People experiencing homelessness need a **secure and trusted digital place** to keep important documents.

1. People experiencing homelessness need a **secure and trusted digital place** to keep important documents.

2. Those digital documents need to have a verification process so that they can eventually be **trusted and accepted** as much as the original source.

3

Our Solution

Platform description

- **User-friendly Webapp acts as a digital wallet (ipad or phone)**
  - Person experiencing homelessness controls documents and ability to share that information
  - Can seamlessly add, organize, share, and invite service providers to verify

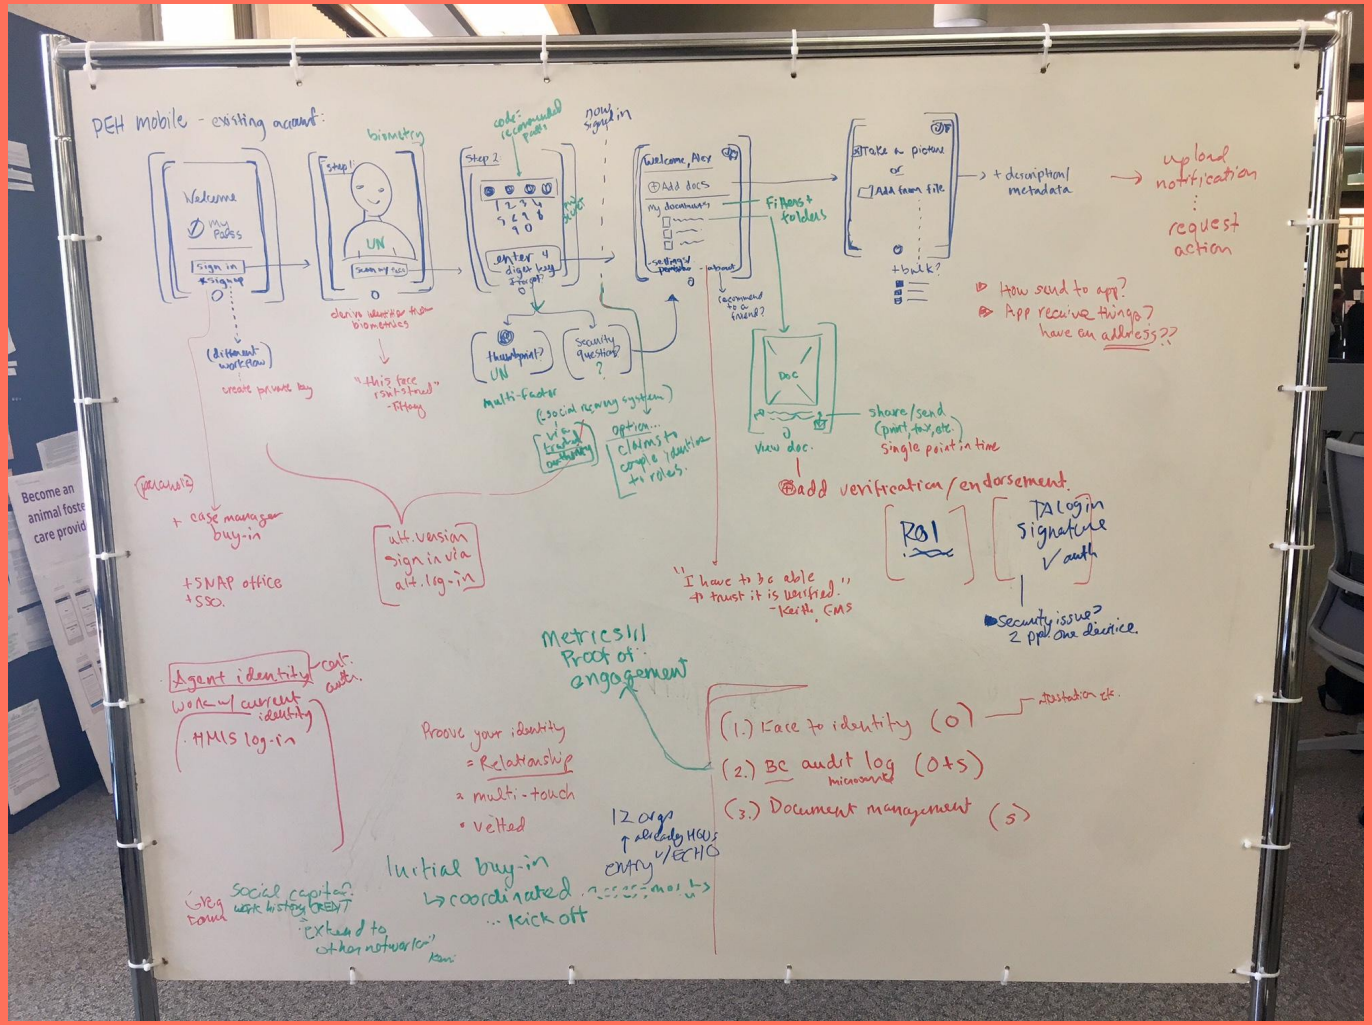
Platform description

- **User-friendly Webapp acts as a digital wallet (ipad or phone)**
  - Person experiencing homelessness controls documents and ability to share that information
  - Can seamlessly add, organize, share, and invite service providers to verify

- **Blockchain as a tool for audit log and payments**
  - Identity derived through biometrics (facial scan) combined with a secret pin provide access to a private key
  - Trusted Authority agents (i.e. case managers) can verify important documents while working with users, which is captured in the immutable audit log

4

Our Solution



PEH mobile - existing account:
Welcome
My Pass
sign in + sign up
biometry
Step 1
UN
scan my face
derive whether face matches biometrics
Step 2
code recommended points
enter 4 digit key fingerprint
now signed in
Welcome, Alex
Add docs
My documents
Settings
Fitness + folders
Take a picture
or
Add from file
+ description/ metadata
upload notification
request action
+ back?
How send to app?
App receive things? have an address??
(different workflow)
create private key
"this face matches stored" - fitness
fingerprint? UN
security questions ?
Multi-factor
(social recovery system)
vouch for identity
options...
claims to couple identities to roles.
(accessment to a friend?
Doc
share/send (print, fax, etc.)
single point in time
view doc.
Add verification/endorsement.
ROI
DA login signature ✓ auth
Security issue? 2 ppl one device.
"I have to be able to trust it is verified." - Keith, CMS
(personal)
+ case manager buy-in
+ SNAP office + SSO.
alt. version sign in via alt. log-in
Metrics!! Proof of engagement
Agent identity
work w/ current identity
HMIS log-in
cert. auth.
Prove your identity
= Relationship
• multi-touch
• vetted
Initial buy-in
↳ coordinated ... kick off
12 orgs already HMIS/ECHO entry
Social capital: work history, GRANT
extend to other networks
(1.) Face to identity (0)
(2.) BC audit log (0+5)
(3.) Document management (5)
distraction etc.

Prototyping and testing (1)

MyPass

Soverign Idenitity for People Experiencing Homelessness

REGISTER

Services packages addressed

- [X] MAP Card
- [X] Housing Application
- [ ] SOAR Application

- Self-upload and control
- Share documentation directly out of the app (email, print, fax)
- Ability for a trusted authority (participant in blockchain) to verify a document
  - I.e. DPS for Texas ID
- Expiration date monitoring
- Percentage completion for service packages

5

Key Metrics

(How will we learn and pivot?)

# of users on-boarded to the app

retained onboarded users overtime

of documents uploaded to the app by each user

“trusted authorities” onboarded to the app by partner agencies

documents verified

Apps like this should be developed and tested using traditional, scalable cloud technologies first.

Decentralized security should be added only after the experience has been accepted by key stakeholders.

Thank You!

Team Transmute
