CODE FOR ALL

The largest civic tech network in the world, amplifying the impact of good ideas through a global network of local organisations.

# What it is, what it isn't

Code for All is

- A distributed network where decisions are made collectively
- A supportive network for its members, helping them to scale their impact, collaboratively
- Always open to new organisations, of all sizes, from all over the world
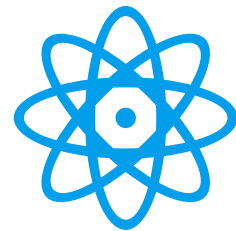

Code for All is not

- All about writing code
- Just replications of Code for America
- Based of just fellowship and brigade models - our members are also conveners, trainers, regrantors, and small expert organizations (amongst many things)
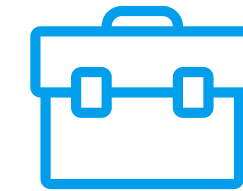

Global Impact

Innovate

We draw on collective knowledge to break down barriers and create solutions that move the needle on collective challenges.

Organize

We draw upon our diverse networks, organizing businesses, teams, individuals and communities around life-changing projects.

Strategize

Our collective years of experience working at national and hyperlocal levels help us to collectively adapt, thrive, and realize our vision.
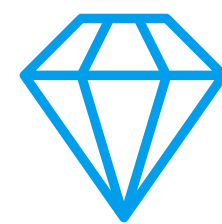

Advocate

We are the biggest advocacy body in civic tech, representing organizations from around the world on the global stage.
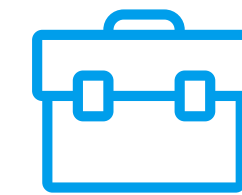

Frameworks

**Peer Learning**

We help share held
knowledge between partners

Redeploy Tools

We offer grants to support
the replication of great work

Workshops

We facilitate knowledge
exchange through events

Summits
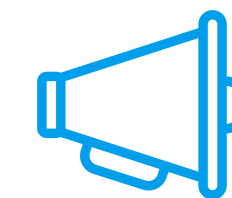

Every year we come together
to learn and strategize

Co-Creation

We work collaboratively to
create all sorts of assets

Mentorship

We connect people inside and
outside the network

Communications

We celebrate and document
the work of our partners

Support

This work is hard. We help
each other get through.

We've enabled our partners to...

Become Disaster Ready
Code for Romania and Code for Mexico are working on replicating disaster relief tools.

Make Closed Systems Open
The Fellowship model is just one of many ways we're transforming government from the inside out.

Empower Data Journalists
Code for Africa is working with Google and the World Bank to train thousands of journalists.

Tackle Climate Change
Code for Germany and Code for Africa are working collaboratively to monitor air and water pollutants.

Combat Corruption
Code for Romania created a tool to catch voting irregularities which is being replicated across the region.
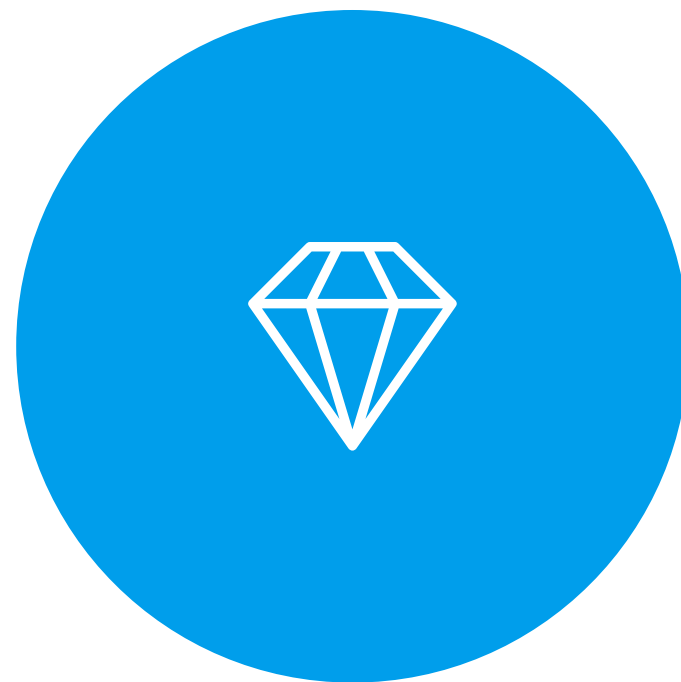

Open Everything
Countless projects are working on open data and open legislation, from South Africa to Poland.

* all while growing a global community of over 350,000 people
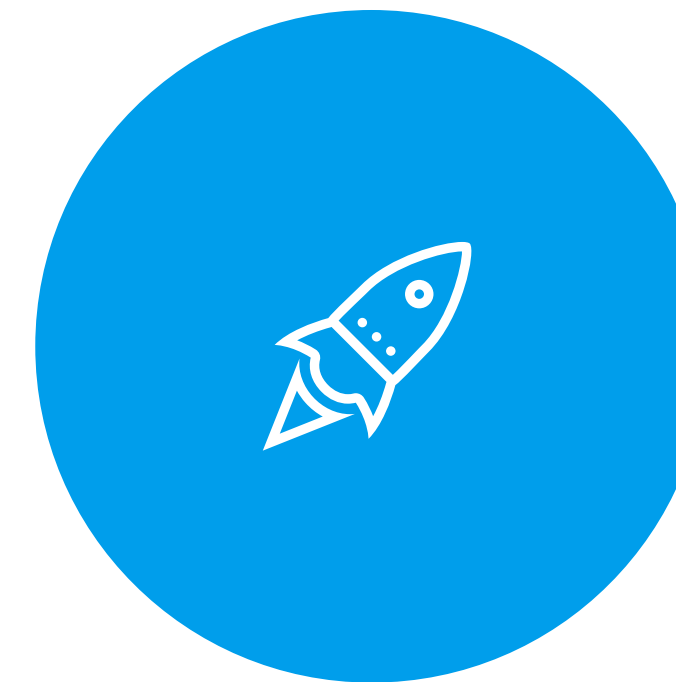

Where we're heading

Create Opportunities

We want to actively find funding opportunities for our partners to collaborate on big, global challenges.

Measure Impact

We want to invest in measuring impact and creating consistent metrics, formats and words for the sector.
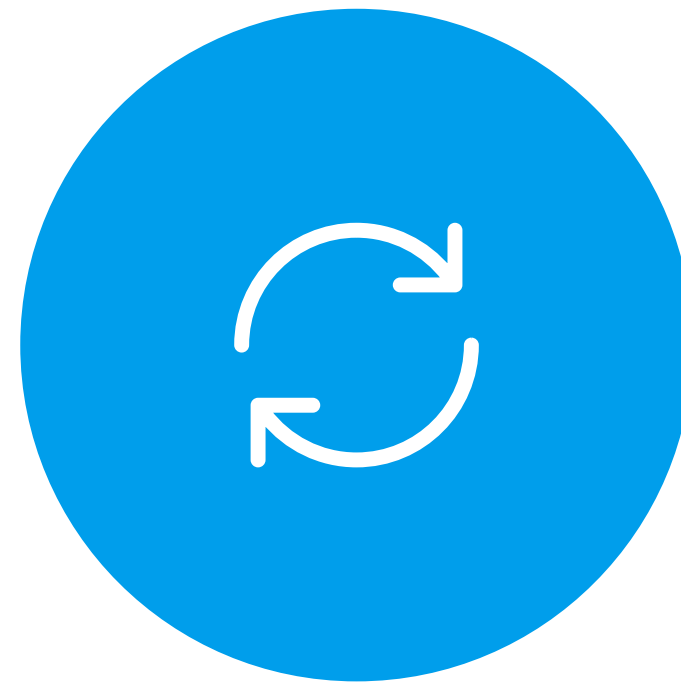

Scale What Works

We want to grow the network for impact, equipping new members with proven tools methods and programs.

What being involved means

Make Your Mark

We'll learn about your goals, connect you with others working on similar issues and in similar ways, and raise your brand awareness at a global level

Collaborate + Grow

Participate in open calls for projects, fundraise jointly with other organizations, put your hand up for opportunities and contribute to working group discussions
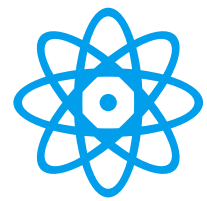

Shape The Future

We actively consult all members about the operations of Code for All, strategic decisions and the long-term direction of opportunities and funding.

What's the ask?

Time

Being an affiliate member means dedicating time to participate in surveys, to talk to others, to convene on events, and to consult directions. Of course, the amount depends on your availability.

Values

All of our Code for All partners understand that great tech is driven by inclusion and collaboration. We ask that all affiliates share our values of openness, sharing and a willingness to work together.

Impact

To be eligible to become an affiliate, all new partners must have shown existing impact, through having implemented (or currently working on) at least one project that aligns to our mission.

Join the movement

Reach out to any of the Code for All team to talk more about joining us.
