## Blockchain: The Future Of Trust

 Google Developer Groups  
Ilorin

**Victoria Abiodun**  
PR MANAGER, MATCH CHAIN

Why Blockchain  
education matters?

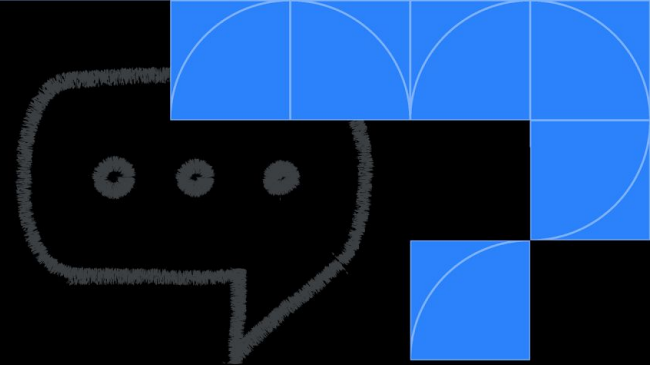

**“Education precedes  
Innovation.”**

```
Text('Simple Statement or URL',  
style: TextStyle(  
color: Colors.blue[200],  
),  
),  
),
```

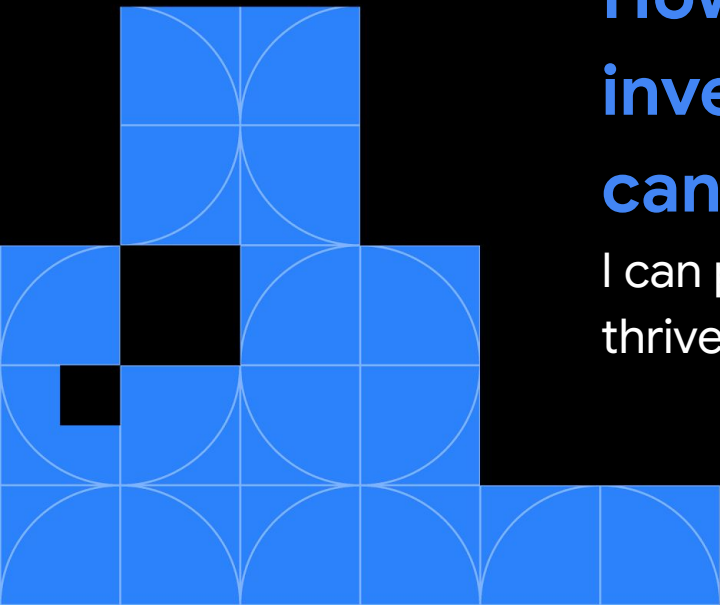

# devfest

```
s.star,  
r: Colors.blue[500],  
Text('23'),
```

**How can you trust your actions and investments in a world where trust can be so easily eroded?**

I can paint a million more cases like this that could really thrive on trust.

# What is Blockchain?

Blockchain technology is simply a **decentralized distributed digital ledger** that records transactions in a **secure and transparent manner**. Data stored on the Blockchain are immutable, meaning once they are added, they cannot be changed and new information can only be added based on consensus, which is agreement between the **network of nodes**.

Blockchain technology powers trust through the following:

**Transparency:** Every participant can verify transactions.

**Security:** Employs strong cryptographic techniques to protect data.

**Immutability:** Once recorded, data cannot be changed.

**Decentralization:** No single point of control.

Then there's Smart Contracts which are basically self-executing contract with the terms of agreements written into lines of code

Blockchain is an emerging technology with room for improvement, but innovations are constantly emerging to make it more efficient and secure.

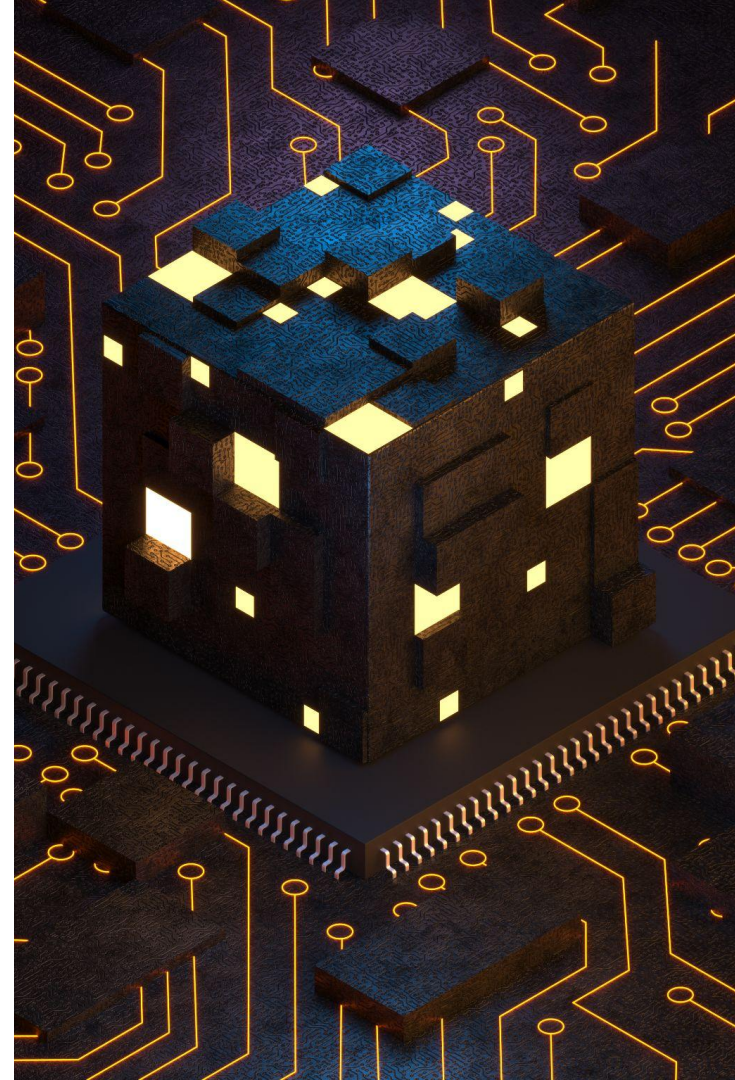

**Blockchain has features that can replace the need to put our trust in centralized bodies we do not know and do not trust.**

**Blockchain is the future of trust  
and we are so fortunate to  
witness its growth and  
development.**

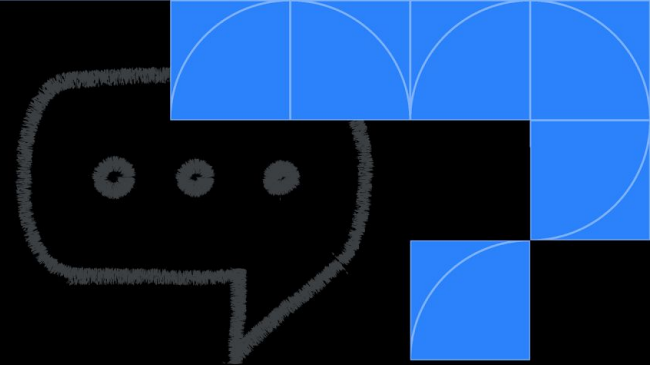

Blockchain is not just a technology; it's a revolutionary concept that has the potential to reshape our world.

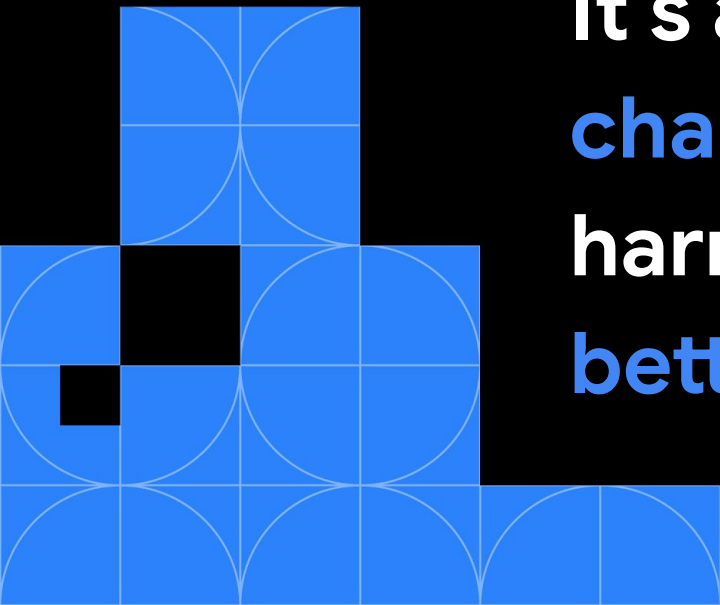

```
Text('Simple Statement or URL',  
  style: TextStyle(  
    color: Colors.blue[200],  
  ),  
),  
),
```

# devfest

```
s.star,  
r: Colors.blue[500],  
Text('23'),
```

It's a force for **positive change**, and it's up to us to harness its potential for the **betterment of society.**

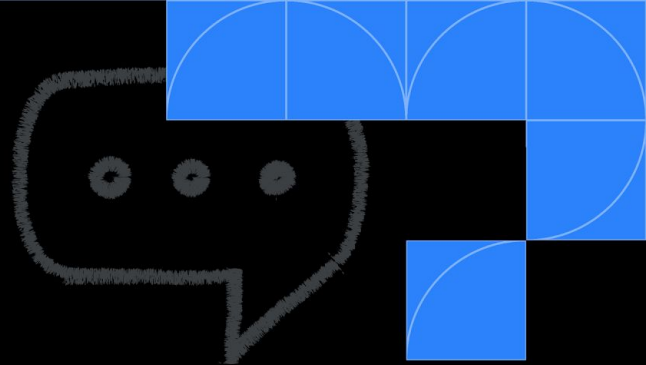

“Every emerging technology has its challenges and limitations, and the blockchain is no exception. However blockchain technology represents a bright future where trust is built on **code, transparency, and collaboration.**”

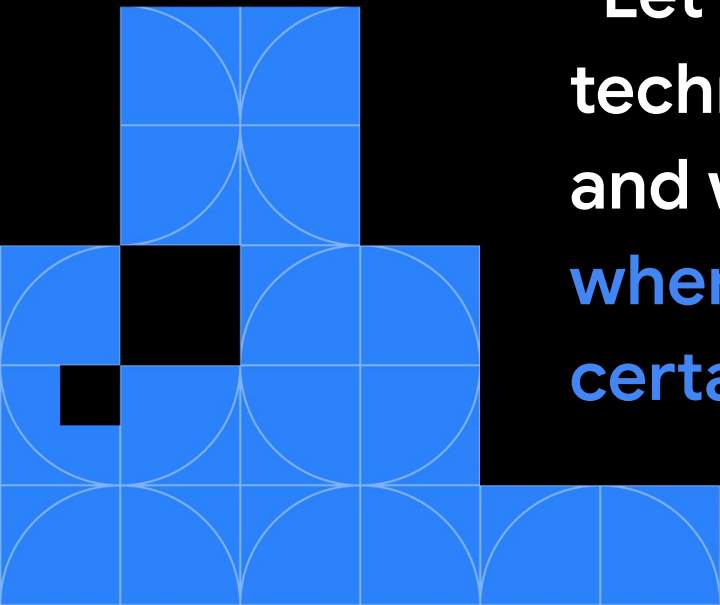

```
Text('Simple Statement or URL',  
  style: TextStyle(  
    color: Colors.blue[200],  
  ),  
),  
),
```

# devfest

```
s.star,  
r: Colors.blue[500],  
Text('23'),
```

**“Let's embrace this remarkable technology, explore its possibilities, and work together to create a future where trust is not a question but a certainty.”**
