Serial Profile PM1

SerialUsage 3
EqReq 02

A serial profile can only have one procedure for eg: MMSL for GR/GI for each serial profile. This means that a Material Master assigned with Serial Profile PM1 when GR (via the MMSL procedure) for the same material for **different scenario** can only have **ONE Rule**

different scenario eg: GR for project stock vs GR for STO for the same material must share this One Rule in MMSL

For Consignment GR for PO item 20 also generated EQ with Serial at GR

Both scenario share the same MMSL procedure where EQ is mandatory at GR

**SAP**

What if for the SAME Material,
we want for PO item GR using 101
if Standard stock GR with Serial with EQ
if Consignment GR with serial without EQ

This Procedure to fine tune Serial+EQ creation is important when you have the SAME material but different scenarios of stock/pm management for different combinations (like above) where standard stock must create EQ at GR while consignment stock for the same material must not activate/create Equipment at the point of GR.
