Project WEB Testing

Product:
Pet Shop

Introduction

In the last few years more & more people in word care about animals & prefer to have a pet in home so many of pet shop are opening all over the word also the home delivery culture is taking a very large area among the young couples so to keep up with the new needs more pet shops go online to cover the needs of the growing market.

Testing approach

The testing team will work according to the STP document , In order to meet deadlines.

Resources: 2 testers. A total of 2 staff members will be assigned to this project

The test site is split, the tests will be conducted in Haifa, Ebelin.

Hardware / Software the Team Needs: 2 Smartphones, 2 PC.

The STP will be divided into 2 epics for each tester, Web & Phone testing, and based on it, we will start the STD document.

Once the STD document is done, 4 rounds of testing will be performed for each tester, 2 for Web & 2 for Phone, At the end of which an STR document will be submitted.

Relevant documents

The following is a list of documents relevant to the preparation of this document:

- STP document
- Deadlines for Documents
- Specification document
- Requirements document
- Explanation page for the projec

Entry and exit criteria

The following is the table of entry and exit criteria for each level of testing in this version:

Level of testing	Entry criteria	Exit criteria
SYSTEM	<ul style="list-style-type: none">● WEBSITE● PC● MOBILE● SANITY● QASE● LICENSE	<ul style="list-style-type: none">● 100% of the tests were run● 80% of the tests were passed successfully● Low severity bugs only● There are no critical faults at this time

STP

- STR document

Differences in other activities

activity	planning	Performance	Reason for difference	The effect of the difference
STP	05.08.2022	08.08.2022	Weekend	Work more hours to finish in time
STD	10.08.2022	11.08.2022	Working of the STP	In this stage didn't think that the delay will effect the plan
Running Tests on PC WEB & opening issues (QASE)	16.08.2022	18.08.2022	The delay in STD & the fact off delay one day before	We work in midnight also
STR	19.08.2022	20.08.2022	The delay is more shorter now	We kept our strategy in working in midnight
Presentation	23.08.2022	23.08.2022		

Executive summary

In this project we chose 4 epics :

1) Category screen 4.5 – included 20 test cases

2) Subcategory screen 4.6 – included 18 test cases

3) Order details summary screen 4.11 – included 13 test cases

4) Order confirmation screen 4.12- included – 19 test cases

We planned to run 100% of the tests 2 times (one on P.C and another run on Mobile)

In fact we were able to run 95% of the tests (67 test run 3 didn't) because the fact that 3 test was blocked .

From the result we can assure that the website is similar even if the user open it in Mobile or P.C

In Category screen we design 20 tests – 14 tests passed 6 bugs

In Subcategory screen we design 18 tests – 16 tests passed 2 bugs

In Order details summary screen we design 13 tests – 8 passed ,4 bugs ,1 blocked

In Order confirmation screen we design 19 tests – 13 passed , 4 bugs , 2 blocked

Total : 70 tests – 51 passed , 16 bugs , 3 blocked

Summary of test results

Our project is done by 2 staff members each one of us take 2 epics and follow the requests that was in Characterization document. the common parts in the project we divided equally to finish the job in time.

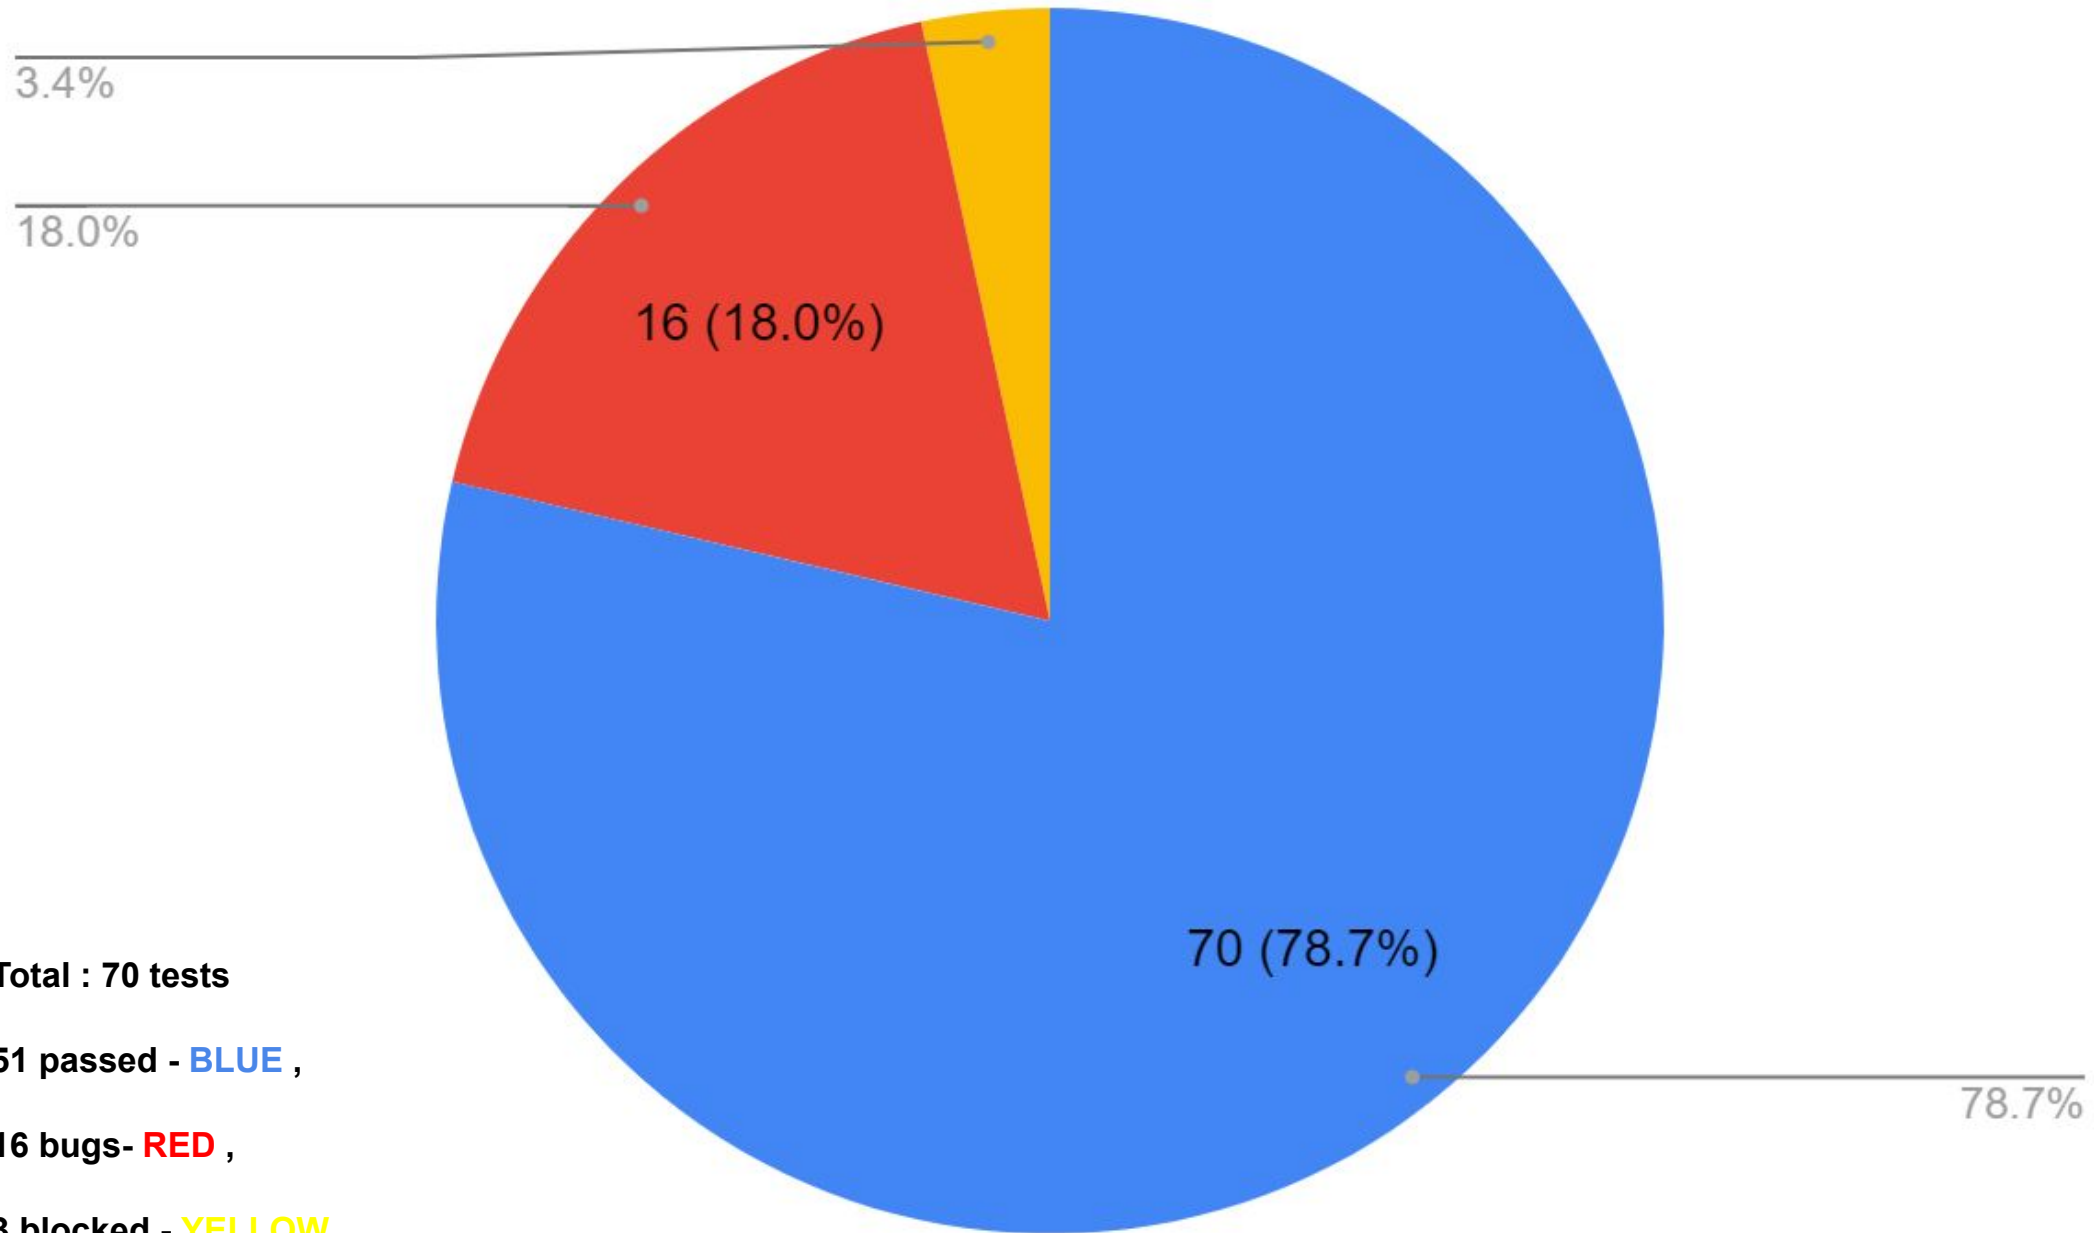

results:

1. We run 70 test cases 2 times (one in P.C & one on Mobile) the results was the same
2. From 70 test cases we had 16 bugs (in mobile runs and also in P.C runs) and 3 blocked.
3. We found 1 critical bug but all the other bugs was normal

Known faults

Below is a summary of the faults discovered in this version, according to the status of the fault and its degree of severity:

Environment	Fault Status	Critical	High	Normal	Low	Total
P.C	In progress	1	0	15	0	16
Mobile	In progress	1	0	15	0	16

Total : 70 tests

51 passed - BLUE ,

16 bugs- RED ,

3 blocked - YELLOW

Conclusions and lessons learned

Here are the conclusions and lessons learned during the testing process of this version.

These conclusions and lessons will be used to improve the testing process in future versions:

- This website act in Mobile as in P.C
- Reading the relevant documents, until full understanding.
- Concentrate the test and bugs into areas, so that we can work by area and not scattered.
- Review the test cases that did not pass, as there is a possibility that we did not use the new tool for testing, QASE, the right way.
- Understand the web requirements, for knowing how to sort the bug level (critical, high, normal...) correctly.
- Update any bug opened in QASE so that there is no miss in a particular bug and waste time repeating test cases that have already been tested.
