Patrick727: Today at 4:17 PM

I was referring to how the telegram is moderated
mods = moderators

so these people would cover our legal tale as well as curate content into the wiki and personally be a bridge between different working groups & initiatives

most of the products from github/ mailing lists/ discord could be curated into a wiki/ forum which requires a manual effort, like a responsibility of one or many moderators (edited) and then maybe theres an automation tool like slash commands on a bot (edited) but that requires education and initiative of every member, so its more of a cultural shift I think wiki/ forum + personal touch w/ mods = graceful solution

Allanc#1136: Today at 4:23 PM

@Patrick727: hmm, a lot for me to digest, let me think a bit. I like your formula: wiki/ forum + personal touch w/ mods = graceful solution

Patrick727: Today at 4:24 PM

thanks yes and thanks for engaging its helping me brainstorm (edited)

So to summarize, I believe the best way to curate and organize information (until social-rho networks) is by using a forum, and a wiki to index info and a group of dedicated moderators to manually demonstrate the best practices and bridge the channels/ initiatives (edited)

the dev team is already keen on this and has a forum and wiki up... pyrofix moves swiftly

The Flight to Mercury

Medha Parikar
Last modified Mar 19, 2018 by Kelly Foster

This page attempts to lay out the large milestones in the project. Dates in the graphical roadmap are not finalized. Please refer to Milestone pages for actual dates.

At a very high level, there are three key milestones in this project:

- Launch of the RChain testnet - July 2018
- Launch of name registry - September 2018
- Launch of the RChain main net - December 2018.

VM Milestones

Name	Status	Date
Roscala.Void release plan	RELEASED	16 Oct 2017
Roscala.Transition release plan	IN DEVELOPMENT	TBD
Roscala.Primitive release plan	PLANNING	
Roscala.FFI- Draft	PLANNING	
Roscala.RBL release plan	PLANNING	

Node Milestones

Name	Status	Date
node - 0.1 release plan	RELEASED	15 Mar 2018
node - 0.2 release plan	IN DEVELOPMENT	29 Mar 2018
node - 0.3 release plan	PLANNING	April
node - 0.4 release plan	PLANNING	May
node - 0.5 release plan	PLANNING	June
node - 0.6	PLANNING	July

Other Interesting Milestones

Name	Status	Date
storage - 0.1.1 release plan	IN DEVELOPMENT	29 Mar 2018
Rholang SDK 0.1	RELEASED	31 Jan 2018

Distributed Autonomous Working Groups

RChain wants to scale its member involvement through a framework we call DAWGs.

The process goes as follows:

1. An individual or group identifies a problem that needs to be solved for the community
2. The group informally forms around a meeting date, chat channel or github project.
3. The group creates an outline for the scope of work in order to solve the problem
4. The group demonstrates their capability to execute with “small wins”
5. After the “small win” is recognized by the membership as complete, the group proposes the authority and resources required to accomplish the next phase of their outlined plan.

[Learn more about existing working groups and how they form here.](#)

Welcome to RChain Cooperatives decision making system.

We use loomio as the tool for decentralized governance of our co-op.

Watch this video with thoughtleaderZ that walks through 5 of our major governance' process to learn how to use the tool.

For more information read the handbook at loomio.coop
