## Cell Protocol

**Smart Automated Market Making** 

## Cell Protocol, or Smart AMM, aims to become the liquidity gateway to CLOBs via simplified automated LP strategies

Cell Protocol democratizes liquidity provision on orderbook DEXs on Solana and beyond. **Liquidity providers** can seamlessly create or copy grid LP strategies like pro market makers, and capture high APY from price fluctuation. **Crypto projects** can easily incentivize community LPs with native tokens. **CLOBs** can enjoy lower slippage and better depth. All empowered by our simplified tools.

**CLOB** 

Flexibility of CLOBs decides its superiority over AMM. But providing liquidity on CLOBs has high barrier, and results in less trading pairs so far

SAMM

Empower individuals to provide liquidity on CLOBs like pros; Empower projects to permissionlessly incentivize LPs

Volatility

Captures high APY from price fluctuations;
Offers superior return vs yield farming or grid MM in CEXs

Expansion

Multichains, cross-margin, launchpad, copy-trade, DEX

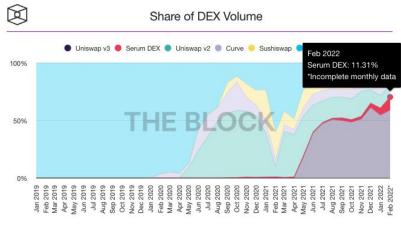

#### DEX outperformed CEX over the past 2 years

https://www.theblockcrypto.com/data/decentralized-finance/dex-non-custodial

DEX trading volume percentage has grown from **less** than 1% to over 10% when comparing to CEXs, which is roughly a 13x Growth in percentage over the last 2 years.

#### 2 CLOBs are on the rise compared to AMMs

https://www.theblockcrypto.com/data/decentralized-finance/dex-non-custodial

Serum DEX currently contributes to **11.3%** of the entire DEX volume since its 2020 Q3 launch. CLOB DEXs on other networks have also started to emerge.

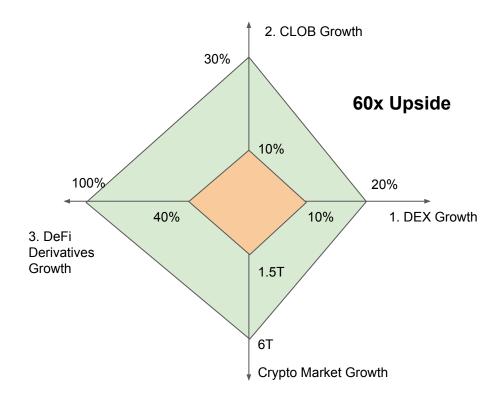

#### 3 Huge Potential in DeFi Derivatives

CeFi Futures/Spot %	DeFi Futures/Spot %	Growth Potential	
300%	40%	=	7x
Feb. 2022	Feb. 2022		

 $\textbf{Source:} \quad \underline{\textbf{https://www.theblockcrypto.com/data/decentralized-finance/derivatives}}$ 

https://ftx.com/volume-monitor

Conservative projection of the market growth in 4 years across all four dimensions will drive substantial adoption of Cell Protocol

#### **High Barriers of Entry**

Market making in TradFi and CeFi are usually done by professional Market Makers with complex algorithms and large capital requirement, leaving the masses out of the equation.

#### **Missing Tools**

There are limited options that allow users to easily provide liquidity on top of CLOBs, which makes liquidity provision for existing markets and liquidity bootstrapping for new markets very challenging. (See Appx. 2 for an example)

#### **Illiquid Long-Tail Assets**

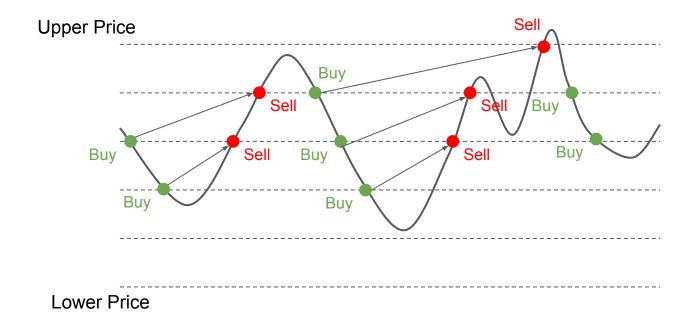

It's hard to incentivise liquidity provision on CLOBs for long-tail assets, which result in untradable market with very high spread and volatility. AMMs solve the problem by LP incentives.

#### High Fees in CEX

CEXs have discriminative commission tiers for normal users and market makers. Even with grid bot, most users are not profitable. There are misalignments between the platform and the investors. Platform earns regardless of investors' performance.

## ellution - Introducing SAMM

SAMM is an automated trading strategy that is constantly "**buy low and sell high**". It generate high yield by capturing profits from crypto price fluctuations. SAMM can be implemented on both CLOB and AMM DEXs with limit orders.

### ellution - Case Study (AMM vs. SAMM)

The main goal for SAMM is to enable normal users to provide liquidity on CLOBs and help projects to easily incentivize their LPs. We believe SAMM is superior to AMM in terms of strategy flexibility and capital efficiency. SAMM incurs less trading fees vs Uniswap v3 when rebalancing portfolio / adjusting LP price range.

#### **Automated Trading with Bots**

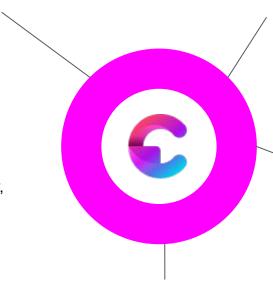

#### Spot Grid:

Make passive income by "Buying Low" and "Selling High"

#### Futures Grid:

In addition to the functionalities provided by the Spot Grid, users can

- apply Long, Short or Neutral strategy, which is useful in both trending and sideway markets
- 2) apply leverages in trades

#### **Social Trading Farm**

Al Bots: A list of best preset strategies that are back-tested against real data in the last 7 days

Community Bots: A list of high-yield strategies run by the community

#### **Project Boosted Farms**

Curated / factory pools for long-tail assets to bootstrap and incentivize LPs with customized incentives

#### **Cross-margin Collateral**

Users can utilize asset A as collateral to provide liquidity for asset B, as long as it maintains sufficient health ratio

#### Liquidity Providers

#### **Active and Professional**

LPs make directional (long/short/neutral) bet while harvesting volatility via Customized LP Bots

Passive and Mass LPs add liquidity via copy-trade LP Farms

#### **Projects**

**Long-tail Assets** that Need to Bootstrap and Incentivize liquidity using Boosted Farms

Collaborating Projects that want to build on top of the Cell infrastructure using our <u>SDK</u>

CLOBs

Partner with Cell to enjoy lower slippage and deeper liquidity

#### **Aligned Interests**

Cell Protocol only charges performance fees when users are actually profitable compared to traditional bots that charges admin fees regardlessly.

#### Combined CeFi & DeFi Experience

Built upon highly scalable networks, like Solana, to provide web2 user experiences, while maintaining intuitive and easy-to-use DeFi look and feel.

#### **Composability & Flexibility**

AMMs (Uniswap), Active Liquidity Management Tools (Gamma), Interest-bearing Collateral Protocol (Abracadabra), and much more can be built on top of Cell.

#### Multichain

The one-stop shop for users to provide liquidity on CLOBs across multiple networks in a single place.

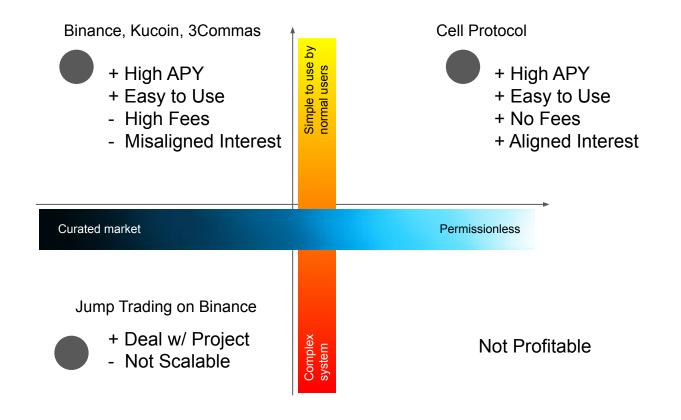

#### **Rich-strategy Farms**

A slew of custom and preset strategies that meet needs of both advanced traders as well as beginners.

#### **Unparalleled Yields**

3 sources of profits compared to trading bots built upon CEXs, including zero trading fees, market making rewards, as well as LP rewards.

## ellution - Product Fits

		Model	Fees	
3rd Party Trading Tools	3Commas 220K Users 22.5B MTV		\$0/29/99 Annual Subscriptio	n + Trading Fees
	600K Users 1.5B MTV		\$0/20 Annual Subscription	+ Trading Fees
CEX Trading Tools	<b>♦</b> BINANCE		No Subscription	+ 0.1% Trading Fees
	KUCOIN		No Subscription	+ 0.1% Trading Fees
	<b>₽</b> Pionex		No Subscription	+ 0.05% Trading Fees
DEX Trading Tools	ell Protocol	Q	No Subscription	+ 0% Trading Fees
				0.04% MM Rewards
				On average 4x APY

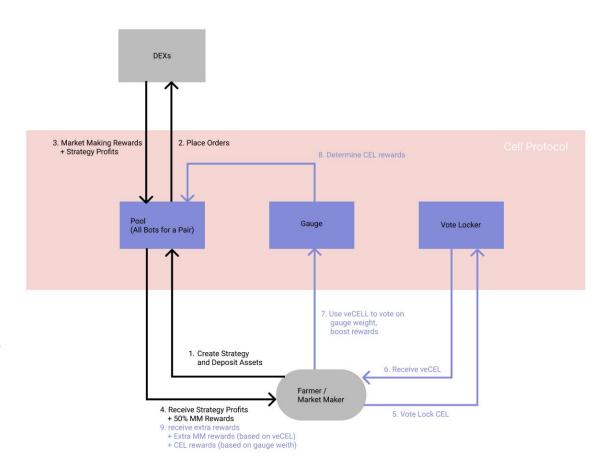

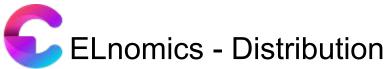

#### veCEL(3, 3)

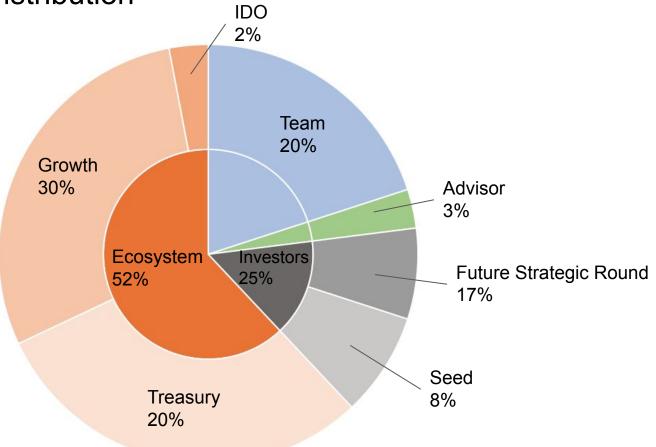

veCEL, or vote-escrowed CEL, is a non-transferable token to encourage long term staking of CEL and improve overall community involvements.

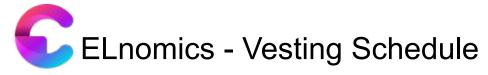

#### **Treasury**

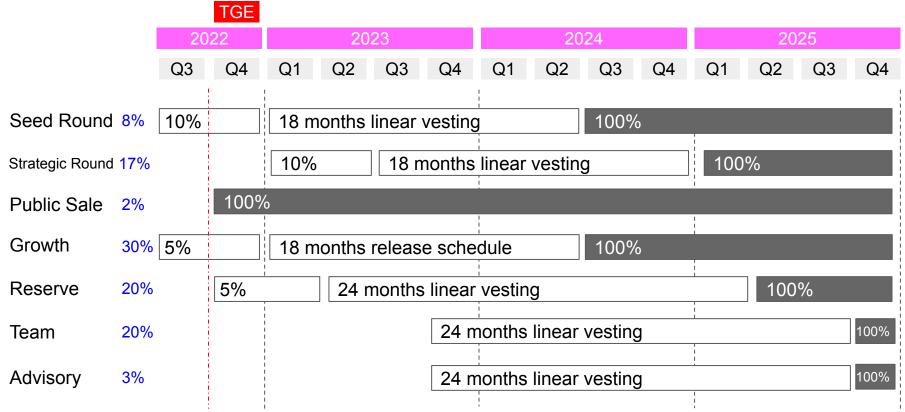

5% Performance Fee earned from trading strategies will be deposited into the DAO Treasury.
