# Table of Contents

I Research Background

II Hypothesis & Objectives

III Methodology

IV Results

V Conclusion & Discussion

# Funding & Disclosures

## Funding sources

- National Institutes of Health (NIH), Grant Number XYZ12345
- National Science Foundation (NSF), Grant Number ABC67890

## Conflict of interest

- Dr. Jane Smith holds a patent related to the research presented
- Dr. John Doe is a consultant for XYZ Pharmaceutical Company
- No other conflicts of interest to declare

## Ethical approvals

- Human studies approved by ABC University IRB, Protocol Number 2024-XYZ
- Animal studies approved by ABC University IACUC, Protocol Number 2024-ABC

## Introduction

- Provide your audience enough background information for them to understand the existing knowledge and the importance of the project
- **Tip:** Use less words and more visuals
- **Tip:** If you find yourself having more than 3 bullet points, split the information into multiple slides to avoid too much clutter on one slide

Use the [Resource section](#) to swap this figure

## I Research Background

A picture is worth a thousand words.  
Need genetics figures? Check out [BioRender!](#)

Provide a brief description of the figure here

## Knowledge Gap

- Highlight the existing gaps in the current state of knowledge that the research aims to address
- Explain why these gaps are important and what implications they have for your field of study
- **Tip:** **Highlight** or **bold** keywords to emphasize your point. Use highlight sparingly

## Questions

1. A question you'd like to explore in your project based on the gaps identified
2. A question you'd like to explore in your project based on the gaps identified
3. A question you'd like to explore in your project based on the gaps identified

## Hypothesis 1

**We hypothesize that [independent variable] will [expected effect] on [dependent variable] in [specific population or condition].**

## Hypothesis 2

**We hypothesize that [independent variable] will [expected effect] on [dependent variable] in [specific population or condition].**

## Research Objectives

- I Research objective 1. For example, “To identify and characterize the genetic variants associated with diabetes through genome-wide association studies (GWAS).” **Tip: Highlight** or **bold** keywords to emphasize your point.
  
- II Research objective 2. For example, “To identify and characterize the genetic variants associated with diabetes through genome-wide association studies (GWAS).”

# Research Methodology

Provide a brief overview of your research approach or the goal of the methodology.

- Overview of your experimental design
- **Tip:** Create visual protocols and/or timeline to demonstrate your methodology using [BioRender](#)

# Experiment Timeline

## Step 1 title

Detail the key actions or events that occur during this step

## Step 2 title

Detail the key actions or events that occur during this step

## Step 3 title

Detail the key actions or events that occur during this step

## Step 4 title

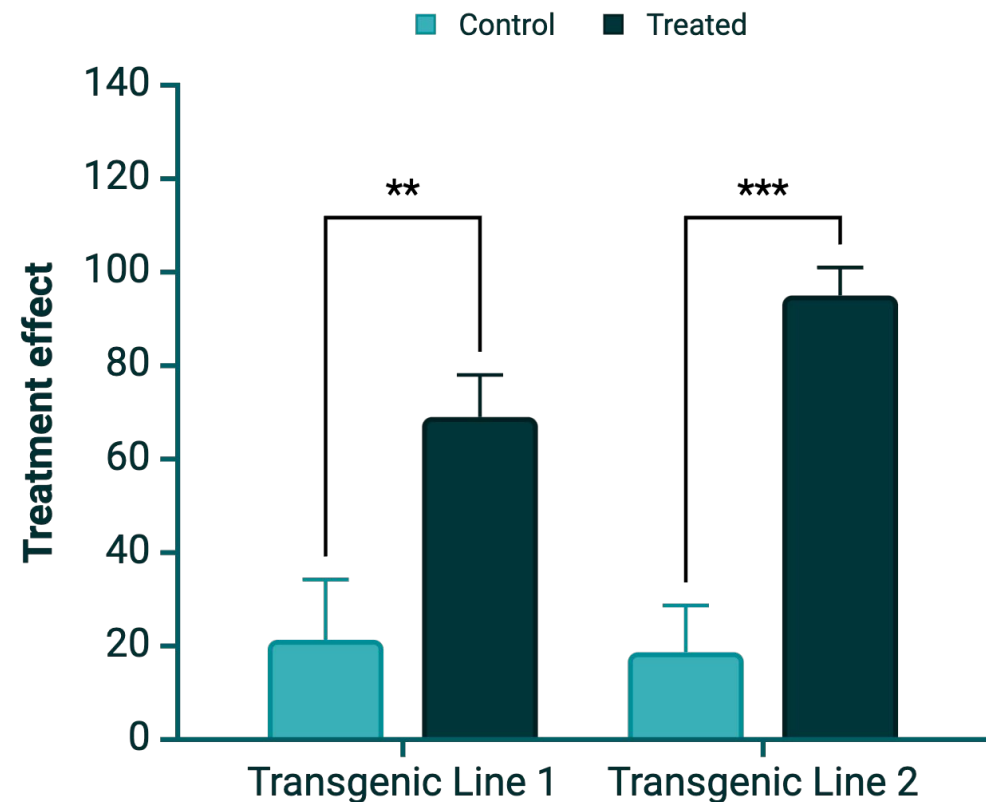

Detail the key actions or events that occur during this step

Use the [Resource section](#) to swap the figures

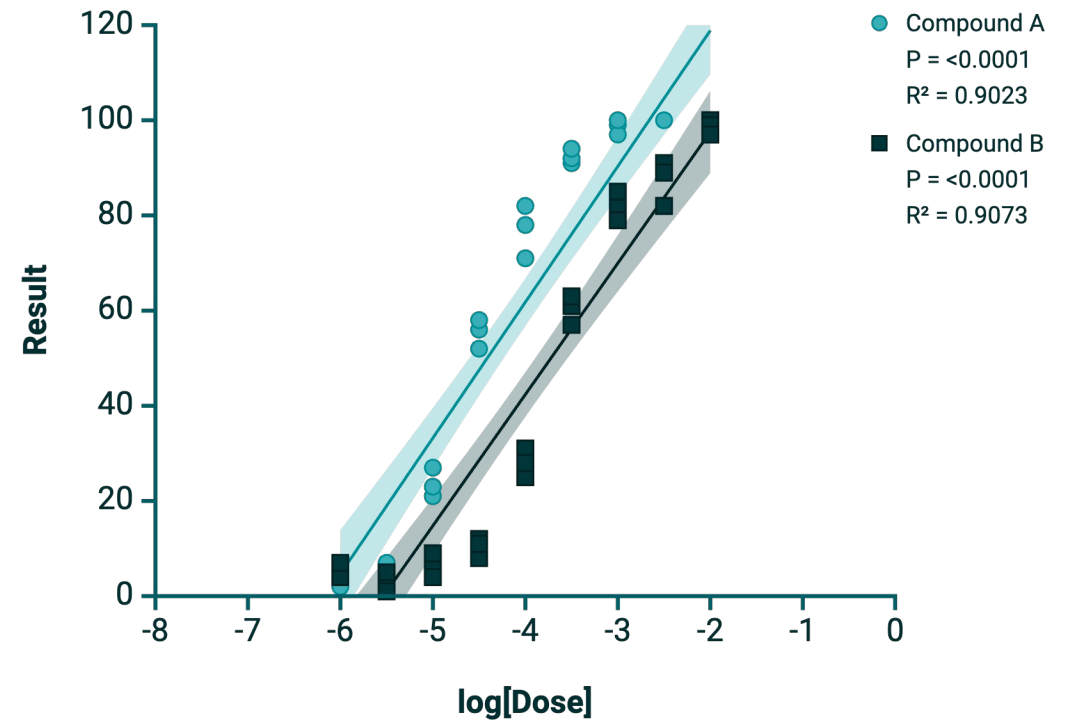

## Detailed Result 1 (for example, “RNA Sequencing Results Revealed Upregulation of *ABC1* Gene”)

- Provide a brief explanation of your interpretation of the data
- Use less words and more visuals
- **Tip:** Ensure each slide focuses on one key result or set of related results to avoid overcrowding
- **Tip:** Create clear, beautiful visualizations of your research data with [BioRender](#)

## Detailed Result 2 (for example, “Effects of Compound A & Compound B on *ABC1* expression”)

- Provide a brief explanation of your interpretation of the data
- Use less words and more visuals
- **Tip:** Ensure each slide focuses on one key result or set of related results to avoid overcrowding
- **Tip:** Create clear, beautiful visualizations of your research data with [BioRender](#)

## Summary of Results

- I Key result 1. For example, “Genome-wide association studies (GWAS) revealed 12 novel loci significantly associated with type 2 diabetes (T2D).” **Tip: Highlight** keywords or phrases to emphasize your point.
- II Key result 2. For example, “Genome-wide association studies (GWAS) revealed 12 novel loci significantly associated with type 2 diabetes (T2D).”
- III Key result 3. For example, “Genome-wide association studies (GWAS) revealed 12 novel loci significantly associated with type 2 diabetes (T2D).”

## Discussion

- Discuss the broader implications of your findings. Consider how they contribute to the field, influence future research, or impact clinical practice or policy
- List the limitations of your study. Discuss any factors that might affect the validity or generalizability of your results
- **Tip:** If you find yourself having more than 3 bullet points, split the information into multiple slides to avoid too much clutter on one slide
- **Tip:** In a list of bullets, the first and last bullets get read the most, so prioritize your content accordingly

## Remaining Questions

- List any questions that remain unanswered in your research
- List any questions that remain unanswered in your research
- List any questions that remain unanswered in your research

## Next Steps

- What you'd like to do next to address the remaining questions
- What you'd like to do next to address the remaining questions
- What you'd like to do next to address the remaining questions

# Supplementary Resources

In the next slides, you will find graphic resources to help you effectively communicate your research

# Resource: Genetics Icons

Use these resources to level up your presentation

DNA

Double-stranded  
break

Point mutation

Genome editing

Chromosome

Chromosome with  
telomeres

Nucleosomes

Epigenetic  
modifications

DNA replication  
fork

Ribosome

RNA

Protein

Discover over 10,000 customizable scientific icons and templates on BioRender. [Sign up free](#) for instant access!

All use of any icons included herein is subject to BioRender's [Terms of Service](#) and [Basic License Terms](#).

# Resource: Lab and Experiment Icons

Use these resources to level up your presentation

Plasmid

GFP

CRISPR/Cas9

Eppendorf tube  
with DNA

PCR tube strip

PCR machine

384 well plate

Thermal cycler

Sequencer

DNA sequencing  
graph

Human genome

Phylogenetic tree
