

Over run to check culled inline

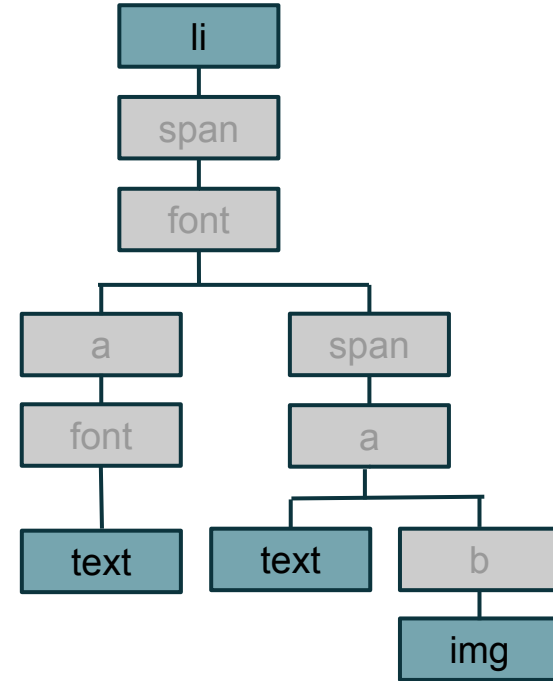

HTML

```
<li>
  <span class="bodytext">
    <font color="#000000" style="font-size: 8.5pt">
      <a href="#">
        <font color="#000000" id="test">Text</font>
      </a>
      <span style="text-decoration: none">
        <a class="bodytext" href="#">
          <b>
            
          </b>
        </a>
      </span>
    </font>
  </span>
</li>
```

Culled inline box tree

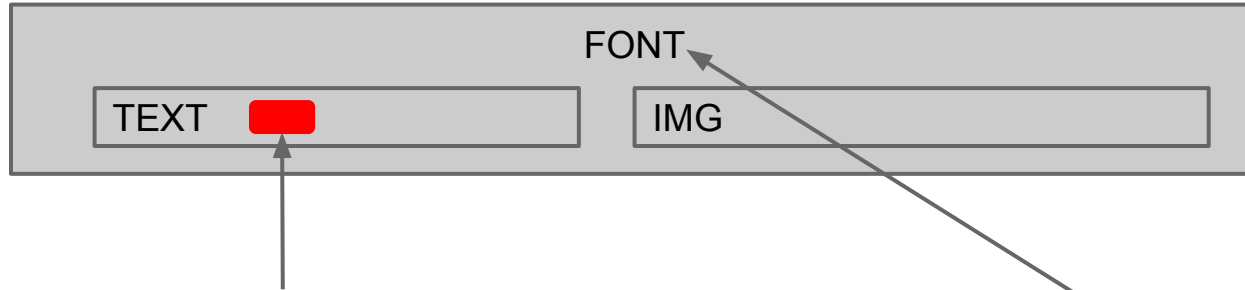

Over run to check culled inline

Over run to check culled inline

what happened?

inline elements' layout

if we hit here,
(both of point-based hittest and area-based hittest)

then the result of hittest is

Because the sequece to get culled parent inline is wrong.
we can see to stop step 4() at previous page.

The Suggest - for example
