Building your own evals w/ LangSmith

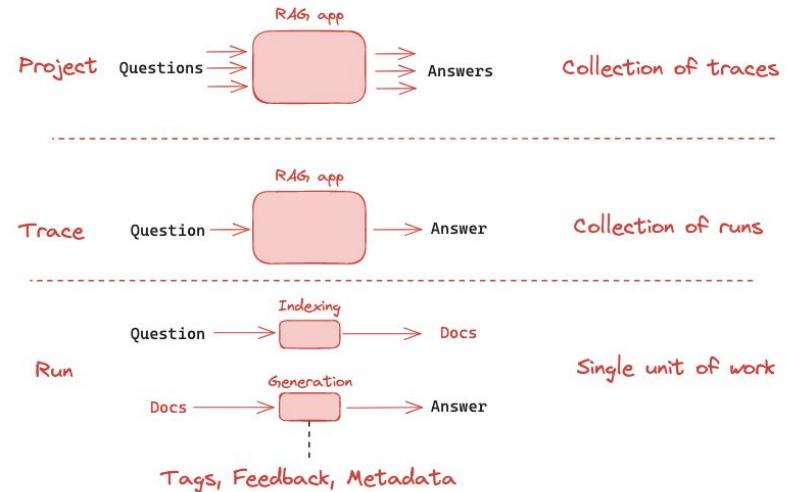

LLM app: Collection of runs (trace)

Dataset

Applying evals

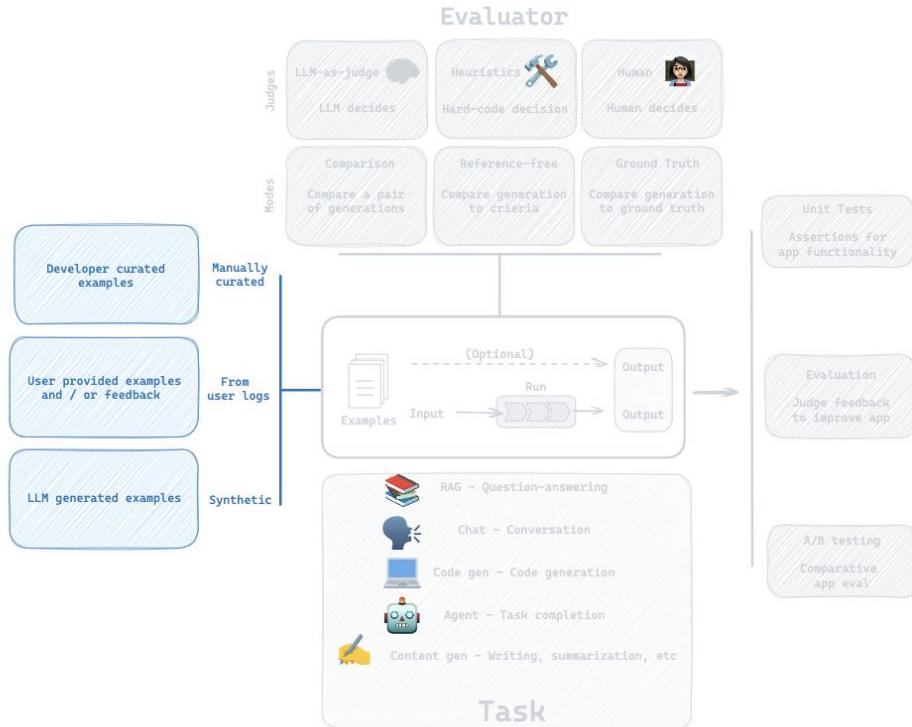

<https://docs.smith.langchain.com/tracing/concepts>

<https://docs.smith.langchain.com/cookbook/tracing-examples/traceable#configuring-traces>

Dataset: Collection of examples

Dataset

<https://docs.smith.langchain.com/tracing/concepts>

Dataset

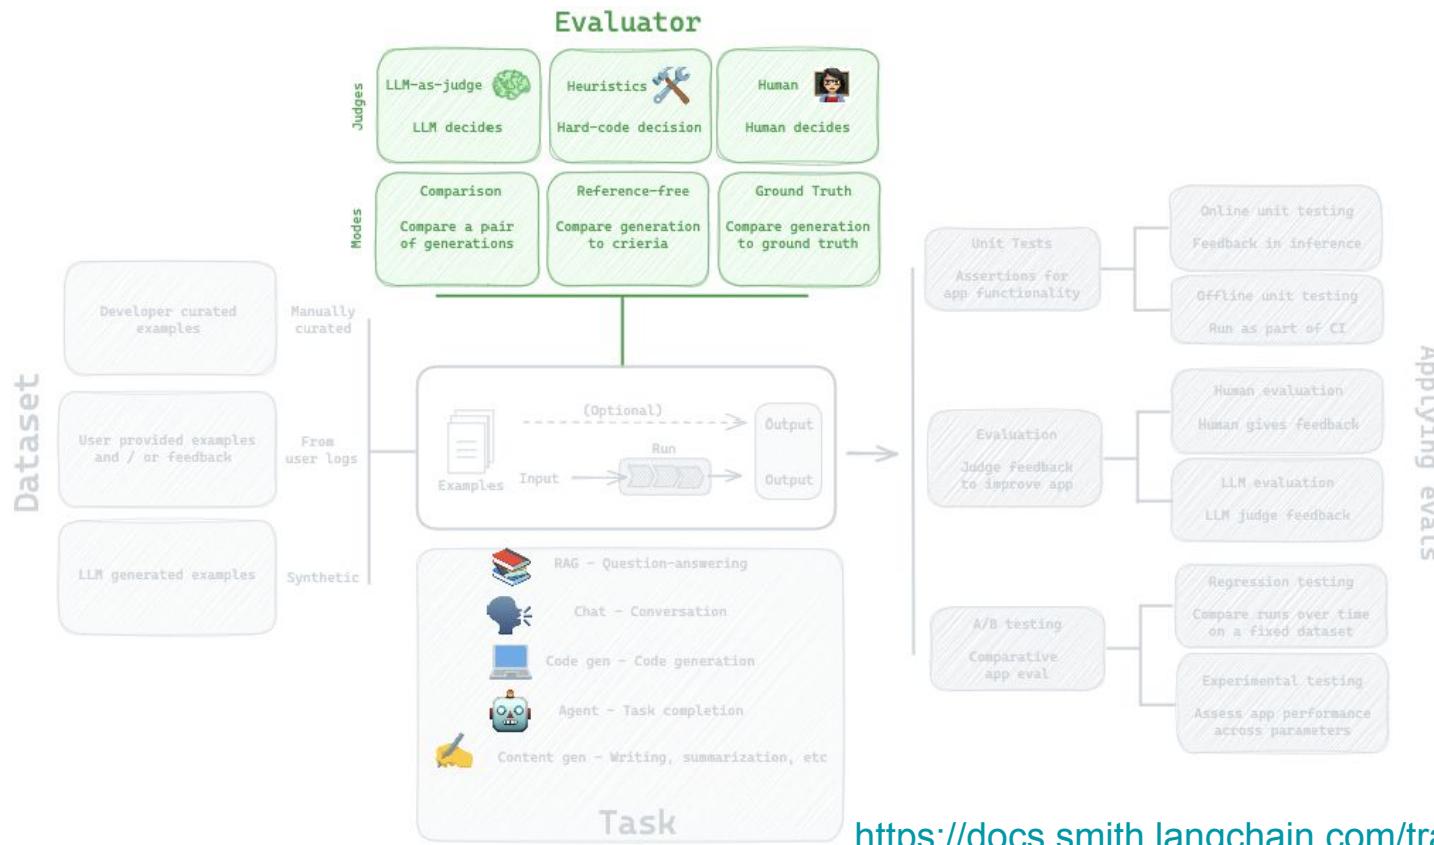

Examples

Example

Collection of examples:
 KV: Inputs, output are KV pairs
 Chat: I/O are chat msg
 LLM: I/O are prompt, response str

Datapoint to evaluate with inputs (and optionally expected outputs)

Function to score LLM app on an example

Information flow
