Notables from FIM4R #16

- Possibly emergent practice from EOSC: community proxy on top of an infrastructure proxy
- EOSC AAI Federation (cf. the 2022 working doc: https://docs.google.com/document/d/1L56uUvs9Tap1tlanendFm-_Jzfu6L7i7FYvzvsX1Mfk/edit
- Possible work ahead: support "middlethings" (SP proxies) as a first class entity type in federation. SNCTFY-ish + transparency
- Peer or self-review based on AARC-G071 Attribute Authorities and Proxy Security
- Difficulties with projects that start out too small to have their own AAI or afford enterprise licenses from commercial vendors. Do we need more eduTeams-ish platforms with common capabilities, "domesticated applications"?

Possibilities for FIM4R #17

- Session around federated shell access, eg, submitting codes (jobs) to infrastructures
- Keycloak session (Hannah)
- GA4GH (Tommi Nyrönen)
- Other communities
  - FIM4L? (Jos W)

Dana's questions of Kevin after FIM4R 16

How does sthis group fit into the "landscape" of fim?

Friends - researchers (maybe weak) but RCD groups - yes

What's the vision of what happens if this works? What are the challenges?

What is *our* status quo? And what do we want to move to?

Is some of the research and other friends things - what is the message?

Are the talkers in this room the leaders?

How do we want our friends to help?

And how do they know when to jump in and help?

(the above is from Dana, via slack, after I stood down from the podium)

FIM4R debrief Jan 20

- Nicole
  - Warren A's talk resonated. I2 has similar needs.
  - Deprovisioning remains hard - knowing when someone has really left a collaboration or role.
- Kevin
  - We've got to get different decision makers in the room. Need to be sure the needs of researchers themselves are represented.
- Dana
  - Where does FIM4R fit into larger FIM landscape? Who are the boundary spanners? What is "middlething" and why are they talking about it? How to operate a medium sized research group.
- Albert
  - Realizes he doesn't know how research is actually done, beyond big science and science gateways. Reprise Kevin's angle a bit.
- Ann
  - Consumer/hosted solutions are everywhere. We need to pay attention (reprise Warren's talk).
