

ReadySet Lab

ReadySet Lab uses an immersive scenario-based training environment where learners meet realistic DEI challenges associated with previous learning and get actionable feedback as they progress.

Real-time practice allows learners to learn from their peers while honing skills, and helps them respond more effectively and confidently when encountering a similar situation.

What a session may involve

- Facilitator-led session that builds on previous self-paced learning and workshops
- Deep experiential learning through small group discussion centered on bespoke scenarios
- Skillbuilding through real-time practice in a safe environment
- Immersive peer-led learning through role play and situational analysis
- Q&A time where learners come prepared with questions from their completed coursework to pose to facilitators for help and guidance
- Feedback and tips that are practical and actionable for learners to take away from the session
