

# Project Title

Your Name, Partner 1's Name, Partner 2's Name

Stats 110 Autumn 2023

## Abstract

The abstract is an overall summary of your project, from the research question to the results to the conclusion. The audience should be able to understand what you found at a high level, just by reading your abstract. A good abstract will entice them to want to read the rest of your poster. Try to keep your abstract to under 150 words.

## Research Question

In this section, you should describe your research question. Discuss the prior work on this topic and/or what motivated you to study this topic.

Feel free to move around the headings if you need more room on this section.

## Data Collection

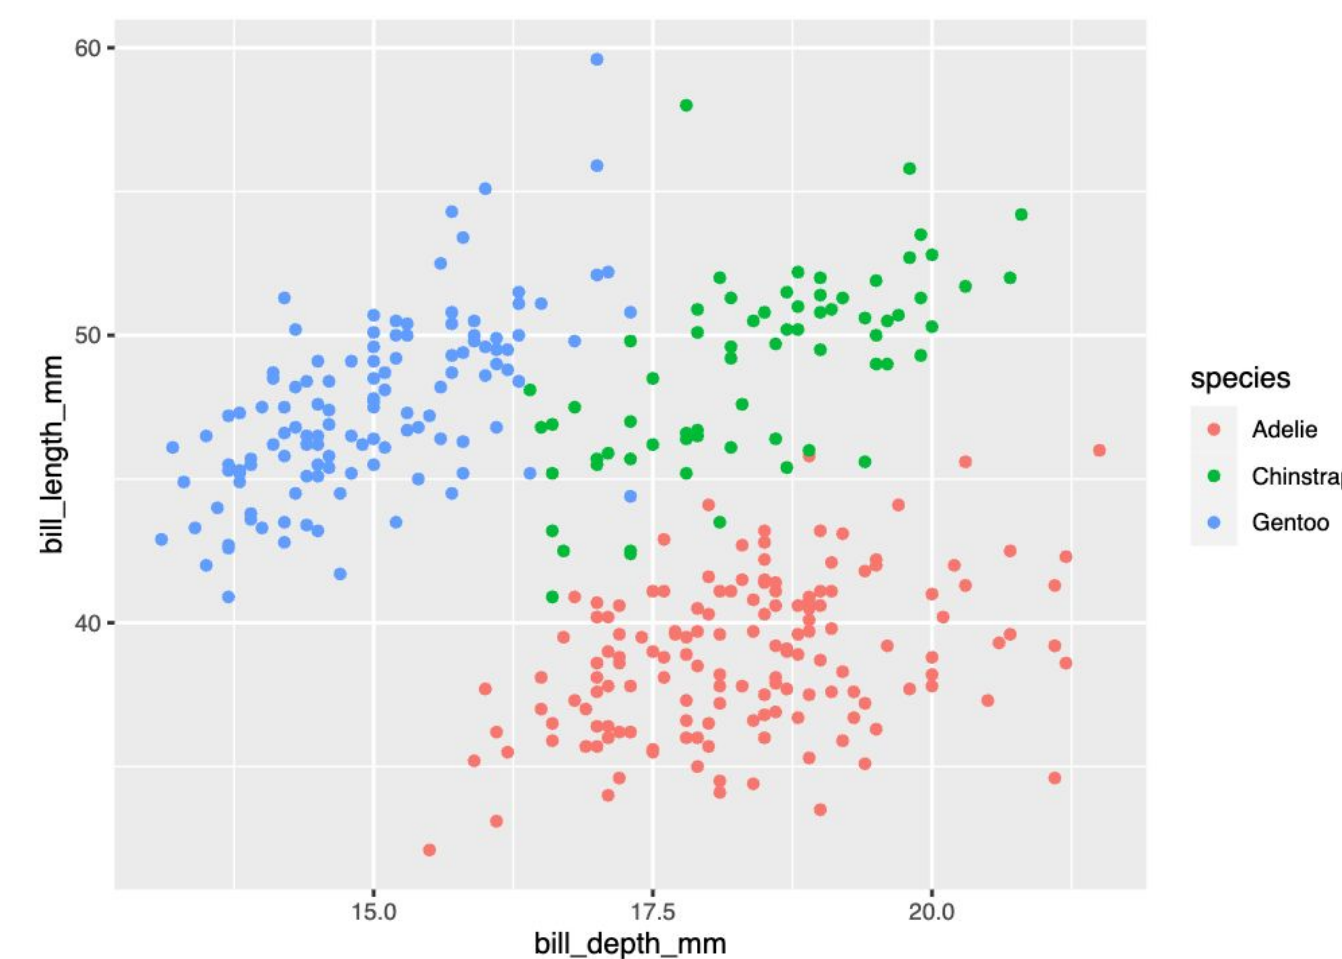

In this section, you should describe how you collected your data.

Feel free to move around the headings if you need more room on this section.

## Descriptive Statistics

In this section, you should provide tables and graphs that help the reader understand the data you collected.

Feel free to move around the headings if you need more room on this section.

## Inferential Statistics

In this section, you should show the results of the hypothesis test and confidence interval. Visuals are preferred to math or words, although you need a mixture of both.

Feel free to move around the headings if you need more room on this section.

## Conclusion

In this section, you should clearly state your findings about the original research question. If applicable, you can also suggest directions for future research.

Feel free to move around the headings if you need more room on this section.
