# Translations overview.

- **What are translation dictionaries?**
- What are language packs?
- What are database translations?
- What order are translations applied in?
- What are the pros/cons of file vs database translations?

# Translations overview.

## What are translation dictionaries?

- A **translation dictionary** is a way to collate phrases
- For a given directory (or the whole Magento codebase)
- Phrases collected using the **i18n:collect-phrases** command
- <https://devdocs.magento.com/guides/v2.2/config-guide/cli/config-cli-subcommands-i18n.html#config-cli-subcommands-xlate-dict>

# Terminal

```
# Collect Phrases command  
bin/magento i18n:collect-phrases  
  
# File to output to  
--output | -o <output-file-name>  
# Directory to collate translations from  
<directory-path>  
# Or, collate from entire codebase  
--magento|-m
```

# Terminal

```
# Collect phrases from all local theme  
bin/magento i18n:collect-phrases -o  
theme-phrases.csv app/design/
```

```
# Collect phrases from entire codebase  
bin/magento i18n:collect-phrases -o  
all-phrases.csv -m
```

PROFESSIONAL  
SOLUTIONS PARTNER

:fisheye

# Translations overview.

## What are translation dictionaries?

- These phrases can then be translated in the created file
- A **theme translation dictionary** is a list of translated phrases used in a theme
- Stored in the **i18n/** directory of the theme, with the filename of the locale e.g. **en\_GB.csv**

PROFESSIONAL  
SOLUTIONS PARTNER

:fisheye

# Translations overview.

- What are translation dictionaries?
- **What are language packs?**
- What are database translations?
- What order are translations applied in?
- What are the pros/cons of file vs database translations?

PROFESSIONAL  
SOLUTIONS PARTNER

:fisheye

# Translations overview.

## What are language packs?

- A **language pack** is a collection of translated phrases for a locale
- Usually generated by the **i18n:collect-phrases** command using **-m** flag
- Files are then output using the **i18n:pack** command specifying the locale it is for e.g. **en\_GB**

PROFESSIONAL  
SOLUTIONS PARTNER

:fisheye

# Terminal

# Pack command

**bin/magento i18n:pack <source-file> <locale>**

# Example

**bin/magento i18n:pack translations.csv en\_GB**

PROFESSIONAL  
SOLUTIONS PARTNER

:fisheye

# Translations overview.

## What are language packs?

- A **language pack** is for the locale is then created
- Under **app/i18n/<Vendor>/<locale>**
  - e.g. **app/i18n/FisheyeAcademy/en\_GB**
  - Required files are **registration.php** and **language.xml**
- <https://devdocs.magento.com/guides/v2.2/config-guide/cli/config-cli-subcommands-i18n.html#config-cli-subcommands-xlate-pack>

# registration.php

```
<?php  
\\Magento\\Framework\\Component\\ComponentRegistrar::register(  
    \\Magento\\Framework\\Component\\ComponentRegistrar::LANGUAGE,  
    'fisheyacademy_en_gb',  
    __DIR__  
);
```

PROFESSIONAL  
SOLUTIONS PARTNER

:fisheye

# language.xml

```
<?xml version="1.0"?>
<language xmlns:xsi="..." xsi:noNamespaceSchemaLocation=
"urn:magento:framework:App/Language/package.xsd">
    <code>en_GB</code>
    <vendor>FisheyeAcademy</vendor>
    <package>en_GB</package>
    <sort_order>10</sort_order>
</language>
```

PROFESSIONAL  
SOLUTIONS PARTNER

:fisheye

# Translations overview.

- What are translation dictionaries?
- What are language packs?
- **What are database translations?**
- What order are translations applied in?
- What are the pros/cons of file vs database translations?

PROFESSIONAL  
SOLUTIONS PARTNER

:fisheye

# Translations overview.

## What are database translations?

- Translations applied by manually overriding on frontend
- Stored in the **translation** database table
- Enable the **Translate Inline** option under **STORE > Settings > Configuration > ADVANCED > Developer**

- Demonstrate an understanding of configuring a widget instance

# Widgets customisation.

## How is a widget instance created?

- Custom widgets can be created with:
  - **etc/widgets.xml** configuration file
  - A block class that implements  
**Magento\Widget\Block\BlockInterface**

# etc/widget.xml

```
<widgets xmlns:xsi="..." xsi:noNamespaceSchemaLocation="...">
    <widget id="sample_widget"
        class="Vendor\Module\Block\Widget\Example">
        <label translate="true">Example Widget</label>
        <description translate="true">An example widget</description>
        <parameters>
            <parameter name="field_name"
                xsi:type="text"
                visible="true"
                required="true"
                sort_order="10">
                <label translate="true">Some field</label>
            </parameter>
        </parameters>
    </widget>
</widgets>
```

# Widgets customisation.

# Email templates customisation.

## How can template variables be used?

- In the same way as **directives**
- Normally available variables listed at top of template file
- A **{{var ...}}** attribute can be used to access variables and object data
  - e.g. **{{var order.getCustomerEmail}}**

# new\_order.html examples

```
order: {{var order.getCustomerEmail}}  
billing: {{var billing.getFirstname}}  
payment_html: {{var payment_html}}  
formattedBillingAddress: {{var formattedBillingAddress}}  
formattedShippingAddress: {{var formattedShippingAddress}}
```

:fisheye

# Code challenge 1.

- Add translatable phrases in your theme for layout, .phtml and .html files
- Export translation phrases using collect-phrases command
- Make some edits to the translations
- Create a language pack from the output from above
- Change locale in admin to the new locale and check the frontend

PROFESSIONAL  
SOLUTIONS PARTNER

:fisheye

# Code challenge 2.

- Review the list of files for generic page customisations in the swift otter study guide (section 8.1)
- Make customisations (or override in your theme) to understand the impact the files have on the global frontend elements
