

The title logo for 'Crypto Samurai' is centered in the image. It features the word 'Crypto' in a stylized, orange-to-yellow gradient font with a white outline, and 'Samurai' in a blue-to-cyan gradient font with a white outline. The text is set against a red diamond-shaped background with a black border. The logo is decorated with stylized blue and purple floral motifs and traditional Japanese cloud patterns (suyari-gumi) in blue and purple.

Crypto Samurai

Legend Of Leading The New Generation For GameFi

Game Introduction

Crypto Samurai is based on the Sengoku Period in Japan. Players play the role of the famous samurais in the game, recruit powerful generals, destroy demons, plunder resources, and free trade in the war-torn era.

Industry Background

As the blockchain world changes with each passing day, blockchain games are also developing rapidly. After the hustle and bustle, as the market cools down, people also begin to calm down and think about what is the real blockchain game? After research, the CryptoSamurai team found that although the current blockchain games are popular, there is still a big problem. There is a certain threshold for ordinary people to enter the game, which greatly separates the game from people, and there is not a clear definition of each level of players between games. As a result, the players can't really experience the fun of the game.

CryptoSamurai, No Threshold, Fair

In CryptoSamurai, all players can acquire in-game characters through various activities and official airdrops in the early stage. The characters can directly enter their game accounts to start the game, and they do not need to purchase NFT to gain admission. Fair and just to all players, truly realize the blockchain games link to everyone.

Unique Operation Concept Makes CryptoSamurai Stand

Out

CryptoSamurai proposes its own folding theory for current blockchain games. Layering players into layers to achieve true in-game equality and then folding them together to create the entire game ecosystem.

So-called player layering is a concept in traditional games, and it's one that blockchain games should learn from. CryptoSamurai has put forward its own operation concept in blockchain games: the folding theory of blockchain games.

The application of CryptoSamurai's folding theory to blockchain games

After studying the current status of blockchain games, CryptoSamurai proposes to divide players into three layers.

Common players: A large number of common players can enjoy the fun of the game for free, get upgraded rewards, and the whole reward will circulate in the game.

Advanced players: Most advanced players can purchase some NFTs of characters and equipment in an appropriate amount, or they can buy characters and equipment in the game market, which can quickly improve the combat effectiveness of the team, make themselves and common players widen the gap, and obtain the game rewards, they can also start earnings.

Senior players: Senior players can purchase high-level NFTs to obtain high-level characters and equipment. The subsequent growth of characters will be smooth, and the improvement of combat power will be a matter of course. With the addition of high-level equipment, the power will crush the other players, then get a lot of benefits.

After the layering is completed, each layer is operated in a refined manner, and then the three are better folded together to complete a better ecosystem construction.

Economic Model

The dual-token model can better govern the ecosystem and increase the game experience

Game token, which can be obtained through exploration mode and ladder battles.

All tokens are only generated in the game.

CSD

The governance token, CST token is issued to expand the CryptoSamurai ecosystem better, which will also be the only token in the future of

CryptoSamurai ecosystem, and will be obtained in the conquered territory and the ladder ranking.

CST

The dual-token promotes the balanced development of the game. After the stable operation of the first game released by CryptoSamurai, it has laid a good foundation for the ecosystem. New games can be continuously released so that players can have more gaming experience.

Game Mode I

There are about four modes

Explore

The player gets a lot of experience upgrades in this mode, and after the beginner level, after level 10, there will be rewards of CSD, and then a certain amount of CSD is expended when attacking territories and ladders.

Chasm

Players can obtain high-quality weapons and equipment through this mode. Weapons and equipment can greatly improve the combat effectiveness of samurai. High-quality weapons can increase the level and gain growth. CSD will be expended when upgrading the weapon level.

Territory

Players can attack any territory by paying a certain amount of CSD. Territory benefits are different. CST is generated in proportion to the occupied time of the player, and CST can be used for the construction of the entire ecosystem.

High Ladder

It is suitable for high-level players. Players can participate in the ladder mode when their combat power reaches a certain level. At first, they are ranked according to the order of entry, and then players can challenge others within a certain range of ranking. If it is successful, the ranking will be exchanged and obtain rewards.

Get Benefits

1. CSD can be obtained after exploring and chasm mode, there will be some CSD rewards in the ladder mode when the ranking is settled.
2. CST benefits mainly come from the time after the battle territory, as well as the ranking of the ladder.

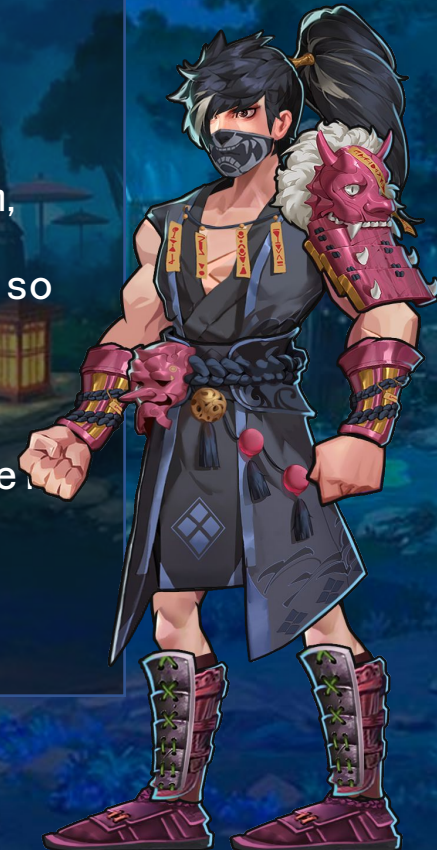

Game Advantages

1. CSD is generated from the game itself, completely unable to release extra, which ensures the fairness of the game and maximizes the protection of players.

2. Game is beautifully designed and has a high degree of freedom.

Different from other page games, crypto itself has more complex mechanism, needs to configure your own player samurai, chooses appropriate weapons, so as to defeat others to gain benefits.

3. It is relatively fair that all of the benefits are from the power level of the players, require players to develop their own characters.

How To Play

1. Players need to register TP wallet, create their own BSC wallet, then go to the official website to download the game, open the game and enter the game through the TP wallet;
2. Players first need to purchase 5 samurais to complete some tasks and obtain items such as recruitment rolls, and then they can recruit higher-level samurais through high-level recruitment cards. It's the best choice for players late.
3. Players can improve their combat power through exploration and chasm mode, and then in territory mode and ladder mode, they can obtain CST rewards and gain benefits through combat power land and ranking.

Market

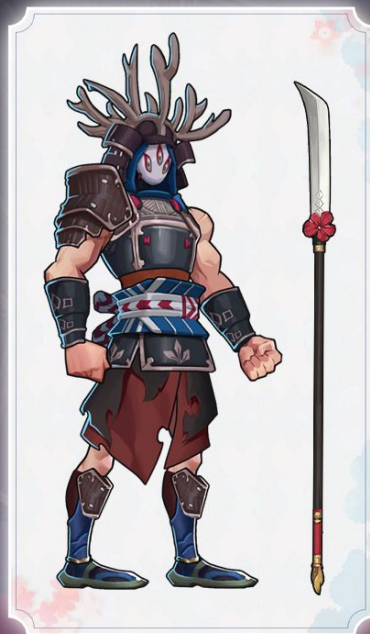

When players have more samurai characters or equipment, they can sell in the market, trade characters, weapons and equipment freely, and players can set their own prices based on the relationship between supply and demand.

The Market interface is displayed on a scroll within a traditional Japanese building. The scroll is titled "Market" and is divided into three main sections: Buy, Sell, and Backpack. On the left side of the scroll, there are four vertical tabs: "Gladius", "Equip", "Card", and "Item". The "Buy" section contains eight character cards arranged in two rows of four. The "Sell" section also contains eight character cards in two rows of four. The "Backpack" section contains six character cards in two rows of three. Each character card shows a character's level and a price of "1234BNB". At the bottom of the scroll, there is a "Transaction Record" button and a "Count: 1/15" indicator.

| Buy | Sell | Backpack |
|--|--|--|
|  1234BNB |  1234BNB |  1234BNB |
|  1234BNB |  1234BNB |  1234BNB |
|  1234BNB |  1234BNB |  1234BNB |
|  1234BNB |  1234BNB |  1234BNB |
|  1234BNB |  1234BNB |  1234BNB |
|  1234BNB |  1234BNB |  1234BNB |

Count: 1/15

Transaction Record

Characters

1. The samurais are divided into five grades: white, green, blue, purple, and orange, which are enhanced in turn. The higher the grade, the stronger the physique of the samurai in all aspects.
2. The physique of a samurai can be understood from six aspects. The current attributes are attack, defense, life, speed, crit, and crit damage. And each item is divided into D, C, B, A, S grades. The higher the samurai rank, the greater the probability of a samurai with a higher physique.
3. Each samurai can wear seven pieces of equipment. The equipment is divided into leg armor, belt, breastplate, helmet, shoulder armor, arm guard, and weapons (weapons are divided into one-handed and two-handed weapons).
4. Each samurai has its own specific attributes. The attributes are random. After getting the samurai, players can view them by themselves.
5. Characters can also improve their level by expending other characters and a certain amount of CSD and CST. The higher the task level and the higher the level, the greater the promotion probability.

Equipment

1. Equipment can be divided into leg armor, belt, breastplate, helmet, shoulder armor, arm guard, weapons (weapons are divided into one-handed and two-handed weapons).
2. The equipment is also divided into grades, white, green, blue, purple, and orange are enhanced in turn. With the enhancement of the grade, the weapon attributes will be greatly improved. Orange weapons are very rare, and one can change the entire battle situation.
3. Equipment can be upgraded by expending other weapons and a certain amount of CSD. CryptoSamurai is the first game of the platform based on the Samurai Metaverse. Based on CST, there will be more games available to players to achieve real chain game interoperability.

Game Balance Mechanism

In CryptoSamurai, there is no absolute powerhouse, and there is a restraint relationship between weapons. Only by properly arranging the lineup can we win every battle.

The sword beats the bow, the bow beats the gun, the gun beats the axe, and the axe beats the sword.

When your weapon is restrained, weapon damage is reduced.

In the game, most of the attacks will be absorbed by the teammates in the front row. Paying attention to the opponent's formation is the key to winning.

In many blockchain games, Crypto Samurai is the only one who thinks about the whole game industry. With its focus on operation, spending more mind on serving players, aiming at more refined operations for players, so that the mature implementation of blockchain games is suitable for all kinds of players, allowing players to obtain the same happiness in different ways, and let the game return to itself!

Thank You
