

**Build. Accelerate. Scale.** 

# Al Driven Project Estimation Builder

a GeekLabs Experiment

#### Why Estimation Builder?

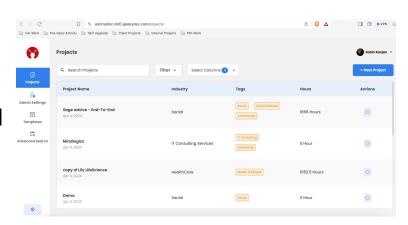

- Efficiency: Streamlines the estimation process into a few clicks.
- Accuracy: Reduces the risk of manual errors.
- Accessibility: Centralized tool accessible by all relevant team members.
- Time-Saving: Significantly reduces the time needed to prepare estimations and SOW documents.

#### **Product Impact**

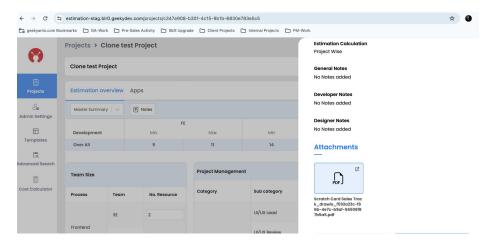

- Project Ballpark: Submitted 150+ ballpark estimates.
- **Templates:** 12+ different industry module templates created so far.
- Features & Bugs: 32+ features & bugs worked upon and deployed in production.
- Data Aggregation: Almost all the data is streamlined based on cost, modules and project types.

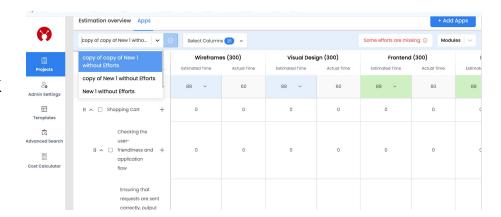

#### **Research and Understand Product Requirement:**

 Ensure thorough research and understanding of the requirement documents added by Sales team in attachment section.

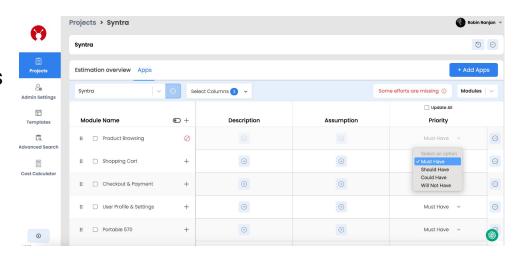

#### **Feature Listing:**

- Adding Apps based on number of actors or systems.
- Adding Module, Task and Subtask based on the product understanding.

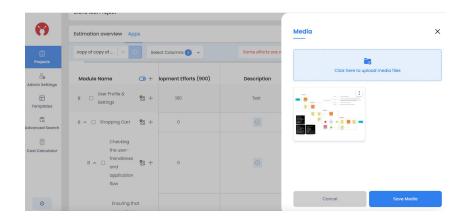

#### **Updating Description, Assumption, Priority:**

 Utilize the "Description", "Assumption", "Priority" columns for each added modules, tasks and subtasks.

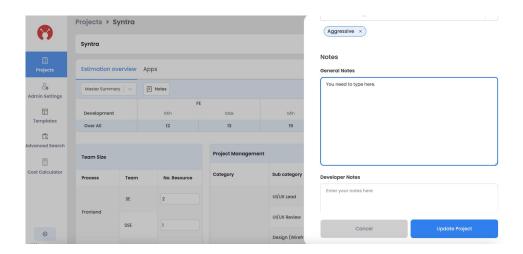

#### **Adding Media:**

- Screen visualisation research using <a href="https://mobbin.com/">https://mobbin.com/</a> or other relevant tools.
- Adding media to each modules, tasks and subtasks.

#### **Add General Notes:**

- Instead of using estimation channel, incorporate general notes in EB.
- These notes serve as valuable assumption pointers for the development process.

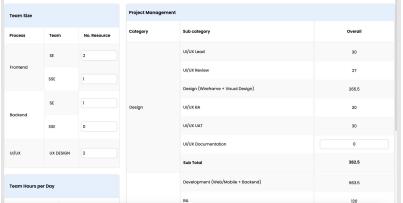

#### **Add Story Points for Actual Time:**

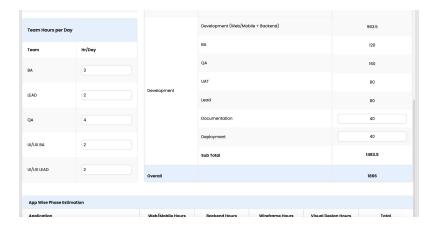

- In the Wireframe, Visual Design,
  Frontend, Integration & Backend sections, assign story points to modules, tasks, or sub-tasks to estimate actual time required.
- Consider buffer time while assigning story points to accommodate unforeseen challenges or delays.

		Fronten	d (40)	Integration	on (35)	Backend	d (35)
Module Name	Ð +	Estimated Time	Actual Time	Estimated Time	Actual Time	Estimated Time	Actual Time
₩ ^ Login	+	55	40	47	35	47	35
# Email   Password	+	0 ~	0	Not Set 0 1	0	0 ~	0
# OTP Auth	+	0 ~	0	2 3 5	0	0 ~	0
# Forgot Password	+	21 ~	16	8 ✓ 13 21	11	13 ~	11
# Reset Password	+	34 ~	24	34 55 89	24	34 ∨	24
+ Add Task							

Consider Team Size, Team Hours, Documentation, and Deployment:

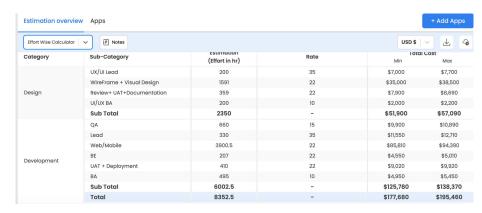

- Take into account team size and hours required for Lead role.
- Address documentation needs and deployment requirements for each application.

#### Review the auto generated effort wise calculator:

- Cost gets updated as per the formula logic for max and min cost range.
- You can also manipulate the cost based on resource number and rate cost.
- Support 3 currency i.e. Rupees,
  Dollar and Pound.

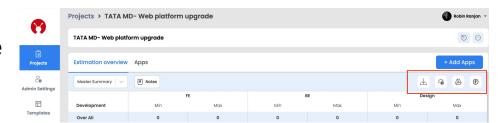

Department			
Application	Rate Card (in USD)	Rate Card (in INR)	Rate Card (in GBP)
BA	10	830	8
Developer	22	1826	17
Lead	35	2905	27
QA	15	1245	12
ux/uı	22	1826	17
UX/UI Lead	35	2905	27

MIN		MAX	

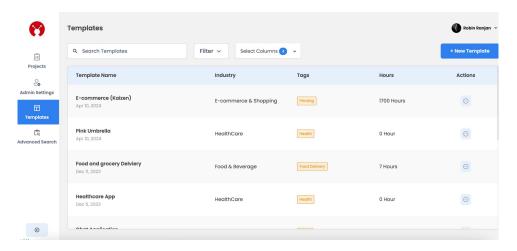

#### **Project Drive Creation:**

- There are 2 types of drive that gets created.
- Project Drive will consist feature list and efforts.
- Cost Drive will consist data related to cost.
- You can download the file into CSV format as well.

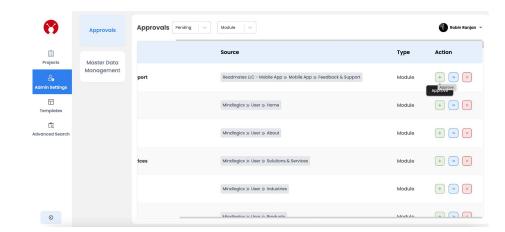

#### **Template Management:**

 Adding the feature listing for converted projects with design screen's media file.

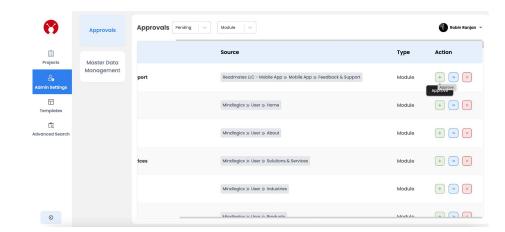

#### **Approval Management:**

- Reviewing the newly added modules, tasks and subtasks.
- Performing actions such as approve, reject and merge with existing modules or tasks.

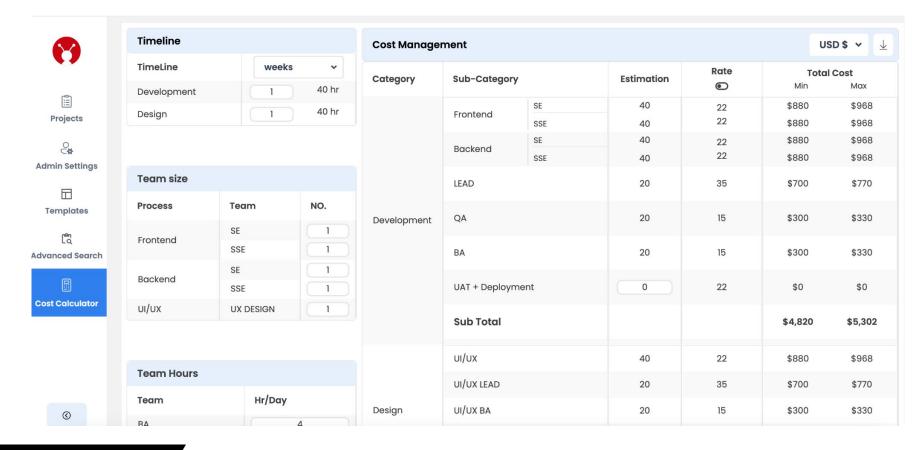

#### **Master Data Management:**

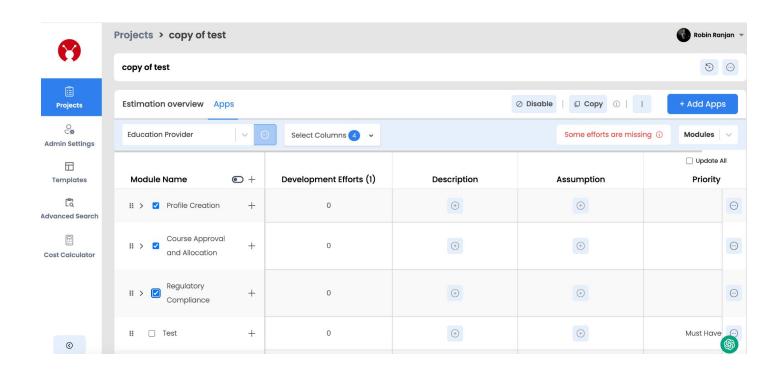

- Reviewing the newly approved modules, tasks and subtasks.
- Performing CRUD and export / import functionality as per requirements.

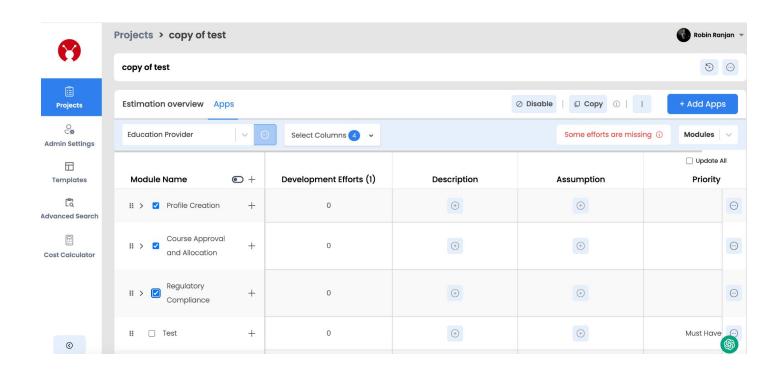

#### **Cost Calculator**

#### **Advance Search Screen Shot**

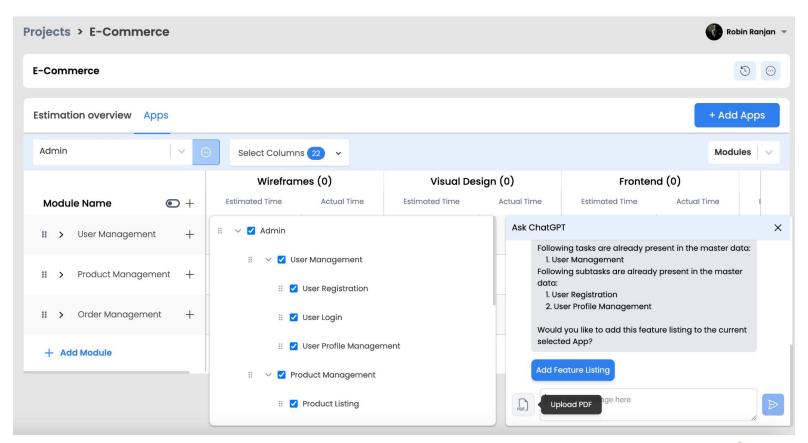

## **Audit Log Screen Shot**

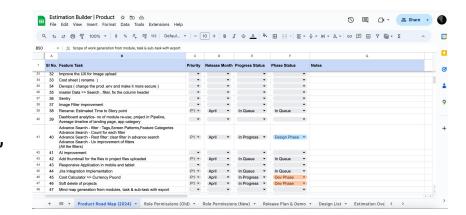

## **Al Improvised**

## **Future Roadmap**

- Work Flow Diagram for seamless Integration with Builder Studio and Estimation Builder.
- Process to integrate builder studio module from business perspective.
- Dashboard Screen in estimation builder related to analytics for trending projects, project conversion, industry, screenshots.
- Automated Sprint Planning, Gantt Chart and Mind-map generation.
- Al Chat Bot feature development.
- Jira board & Hubspot integration.
