RDM, FAIR and Open Science

- Just part of good research practice
- Helps prevent data loss
- Supports research integrity and enables validation
- Helps you produce FAIR data and get more impact from your work
- Makes it easier to collaborate
- Leads to real world benefits!

Open data sharing accelerates COVID-19 research

19 Oct 2020 - 15:51

Summary

- Open access increases the visibility of research data and information, giving scientists the ability to build upon and react to existing research quickly
- EMBL-EBI launched the European COVID-19 Data Platform to enable rapid access to datasets and results pertaining to the SARS-CoV-2 outbreak
- Open access data sharing has greatly accelerated COVID-19 research and helps further our understanding of the biology, transmission, and spread of the SARS-CoV-2 virus

Remember - your local support team is there to help!

The screenshot shows the 'Data management plan' page on the Bibliotècnica website. The page features a navigation bar with the UPC logo and 'Bibliotècnica' text, and a menu with 'STUDENTS', 'PROFESSORS', 'RESEARCHERS', and 'LIBRARIES'. The main content area includes a definition of a DMP, a list of expandable sections, and a sidebar with several resource cards.

Data management plan

The Data Management Plan or Data Management Plan (DMP) is a methodological document that describes the life cycle of the data collected, generated and processed during a research project, a doctoral thesis, etc.

More and more funding entities like the H2020 and the State Plan require researchers to prepare a DMP.

- What information must a Data Management Plan have
- How to prepare a DMP
- Good practices in research data management
