Notes			
Toby currently uses FL Studio 10. Some old tracks use FL Studio 8 such as his Homestuck tracks or old Tumblr posts.			
Toby uses NES VST 1.1 instead of 1.2. This is because the vibrato in NES VST 1.1's pitch is slightly off which explains why some of Toby's songs sound pitched	d up. 1.1 is also louder than 1.2. (Thank you ni	ni for this info)	
Leave the Fruity Limiter on the master when you start a recreation, then change the ceiling and gain accordingly. Though it's usually not by much. [1]			
Use events rather than automation clips for things like volume or pitch bends.			
"THFont" or "THInst" is also known as "Touhou", being the original name of the soundfont. (Not the actual Touhou Soundfont by the way).			
Magical8bitplugin sounds are slightly brighter than NES VST 1.1 (as well as having different waveforms) so keep that in mind for 8-bit tracks.			
Toby has been proven to use the original Fruity Reeverb 1 and Fruity Delay 2 for Reverb and Delay respectively.			
Please keep in mind that the decay and ms settings on reverb and delay depend on your BPM.			
Soundgoodizer usage from Toby is very small from what's commonly believed. Don't overuse it.			
The information for each track for UNDERTALE is based on the original gamefiles' version, which are directly exported from FL Studio. The OST versions are	often sped up so recreating the gamefiles'	version would lead to more accurate results.	
Various UT and DR instruments are detuned to change their timbre; If you're unsure, pitching the instrument 200 cents down or up is a good rule of thumb	L.		
Toby uses the original version of Magical8bitPlugin, not 2. (Duty Cycle works diferently between versions).			
If you want to change how you are credited or submit any new findings, send a message to the contact email.			
To-Do (For editors)			
- Add BPMs and time signatures (Only Little Town Hero left)			
- Add pictures of Duty Cycles (WIP)			
- Make a demo for every single patch			
Please give credit when reposting this info.

- [1] Commonly, Toby also turns down the attack, release and sustain knobs to zero.
- [2] Really only ever used to speed up/slow songs down for the OST and gamefiles releases. Other than that, it's used in The Choice.

[183] Discontinued

Revalver MK 3.5 is an updated version... which is also discontinued...

MK 3.5 presets are unusable on Revalver 4.

[184] Alongside the Shreddage Presets bank.

Discontinued after Audio Media Research got the rights of Revalver 4.

[210] It's just an easier way to get a similar mastering to his music but I can assure you that the cases where he uses it are very minimal. The only actual OST release he used it is on the Soundtrack version of BIG SHOT. Anything else is 2010 tracks or backing elements like drums and snares.

[223] Confirmed by Toby's commentary on Alternia

[224] Has reverb and is paulstretched to 15% of its original speed.

The pitch is different from either version of Undertale (-208 cents from the game files ver, +75 from the OST ver).

Toby most likely used the OST version, as the mellotron flute can be faintly and briefly heard near the end.

[232] Yes, ALL of the instrument above are detuned -100 cents, you can prove it by listening to the sample change.

[233] Detuned -100 cents, the MIDI velocity is above 100 to trigger the vibrato sample but not reaching 127 since that triggers the slide down sample in the soundfont.

[245] Double tracked with Stereo Enhancer (Artifical Double Tracking) or with two instances of Shreddage with the second one having a different Timing.

Amped with Heavy Chugg from Revalver HPSE's Shreddage Presets

[246] Around 0.3 of release, specifically 13 ms for the lead. It has a second detuned instance throughout the entire song minus the start and finish.

For bassline/pad it's around 0.5, specifically 31 ms.

[303] Makes sense to be Burning Grooves since Shan was sent CD libraries during SGM production.

[304] Drums use SGM's as a base, it also uses a few other soundfonts like Arachno for the Organs
