What are Atomic Sheets?

Elements of spreadsheets that you can "copy to" your sheets, to use immediately.

Aren't these templates?

While templates are well designed sheets that help you start, Atomic Sheets are tabs you can insert into your existing google sheets. Help users navigate your sheet. Create a pixel art landing page. Turn your shit sheet into a sweet sheet.

Why are there AtomicSheets?

While I run [BetterSheets.co](https://bettersheets.co) to teach how to do better design, faster work, and create in general better google sheets, sometimes you just want to literally copy the sheet and use it right away.

Instead of watching the sausage get made, you want to eat the sausage.

AtomicSheets are the glorious grilled sausages of Google Sheets. Ready to eat, fresh and hot right off the grill.

How do I use Atomic Sheets?
