Bear Creek Nature Park, situated along the Oyster River half way between Courtenay and Campbell River, offers fine opportunities for wildlife viewing and recreation. The newly acquired 161-acre park features habitats rich in biodiversity, including floodplains, wetlands and second-growth forest. In the forest, listen for the long whistle of the Varied Thrush, or check the river for Common Merganser ducks. Hooded Mergansers may be seen in the wetlands of the park, and nesting boxes have been placed to attract colourful Wood Ducks. Many wildflowers bloom along the floodplains in the spring including spectacular pink and white fawn lilies. For many years the Oyster River Enhancement Society (ORES) has operated a volunteer-run salmon hatchery that is now within the park, and extensive work has been done to improve salmon habitat in the area. Bear Creek Nature Park has a network of multi-use trails for hiking, biking and horseback riding. The main entrance to the park is on Macaulay Road in Black Creek.

Site Map

Geographical Description	Along the Oyster River at Oyster River Hatchery, 3 km upstream from Oyster River Estuary.
Area/ Trail Length	64 ha. Some hills.
Habitat	Riparian 2nd growth forest, wetlands.
