Bird watching, wildlife viewing and scenic seascapes are highlights of the quaint community of Union Bay, just a five minute drive south of Courtenay on Highway 19A. The shallow waters of the bay are ideal for shellfish harvesting, a major industry in Baynes Sound. The rocky beaches and sand flats also provide a wonderful habitat for many birds. Look for seabirds such as American Wigeon, Scoters, Harlequins, Northern Pintail and Horned Grebes. Shorebirds are also abundant here, such as Black-bellied Plovers, Black Turnstones and Dunlin. Watch for Bald Eagles soaring overhead, Kingfishers diving for fish and Pelagic and Double-crested Cormorants perching on old pilings. Sea Lions, Harbour Seals and River Otters can often be spotted in these waters also. Historically, Union Bay was a shipping place for coal mined in Cumberland. Today, the natural beauty of Union Bay, and other small communities on Eastern Vancouver Island attract tourists for outdoor recreation and nature viewing. Trails along Washer (Hart) Creek are on private property slated for development, with limited public access.
