	How to stop suffering and start enjoying the bootcamp's deadline	Cool, that's certainly new...	OK, enjoying deadline seems quite masochism, how they did it?			The bootcamp facilitator (Rosie, Lien, Jo) => Expose your great work on Cinnamon Fan Page	Some Cinnamon AI Researchers => Give you good grade - They already have sophisticated Flax Pipeline - That pipeline is presented to you, by Dini	Other teams
Background warmup: - Show the picture of our schedule + Show the ideal schedule + Show how the real schedule turns out to be?	(Warm up with images of our schedules)	Oh O_O so that kid is not gonna talk about Flax all over again, that's good...	Hmm, OK, Flax again. But their schedule is crazy and interesting...		Problems	They need to show how good the student work are => It has to be....impressive enough for the general audience	What aspects of the Flax that I havent try Engineer parts => The comparison, what is new	What aspects of the Flax that I havent try Engineer parts => The comparison, what is new
Problem: People are not happy having deadlines, some felt irritating Solution: Introduce 2 aspects that need to be tackle: + How to teamwork (the right way) + How not to be distracted	How to stop suffering and start enjoy the bootcamp's deadline?		Good, something other then Flax <3.		Itchy questions		Do you really understand the Flax? Do you really understand the explainer? How can two students complete the Flax and the Explainer in 2 weeks?	Do you know which engineering parts you havent try for the Flax?
Problem: Teamworking is frustrated, everyone is different, how to unite? Solution: - Tracking: Knowing what others are doing - Prioritizing: Limited time, how to act fast! - Communication: Care about your teammates' wellbeing - Documenting: How to make your code readable & reusable? (Scaling up project) Main idea - objective: Care about your people's well being and what they're doing	How to teamwork (the right way)		Care? Like....asking teammate actively? But is this applicable to all types of people OAO? Some might be shy.... Yeap, documenting and code quality realy matters. So how do they measure priority anyway? Any examples?		Answers to the itchy questions		2 Stressful weeks: Manage to complete the Flax in limited time, and how it is doing	
Problem: You may sometimes feel less productive: instead of working, you're watching (pause) Youtube Solution: - Do one thing at a time: Our brains are bad at multitasking, why stress on them? (Directed focus > Scattered focus) - Make a todo list: Make sure you know what you're up to (To do list is very rewarding) Main idea - objective: Be focus on what you're doing, 1 thing at a time	How not to be focus in the distracting world?		Yeah that often happens, Especially when many of us are WFH, some people might find concentrating challenging while others find it super easy. SO this is their secret ingredient!		What is the purpose of making a slide?	The slide are for transferring messages	Knowledge	Recognition
Two messages: - Care about the people - Be focus on what you're doing, 1 thing at a time	Summary		What!? Where are the cute drawings! I've been expecting them! despite the technical details is not fully necessary in slides.... but people would be glad to see some result of your challenges @_@			The presentation should have a call for action	"Now go out and buy one!"	
	Demo				What are your audience, and what you want them to do, afterwards			
					Research Proposal	I want you to give me some resources		
					Competition	I want you to contact me afterward		
					Bootcamp report	I want you to give me good grade		
					Minimize talking about what they: - already know - will not understand Maximize what significant	How I manage my project, how is my team doing well		
You should stop, no slide should be more than 40-pages!!!
