

Please find current information regarding the spreadsheet below:

This is a constantly updated and incomplete list of goth/post-punk and sub genres releases from the whole year.

Bands I've listed play a range of goth genres from goth rock, deathrock, darkwave, coldwave, and ethereal wave but expect influences and/or tracks from other genres, as bands like to mix and experiment, such as electronic/synthpop/new wave/minimal wave/shoegaze, too.

If you have any suggestions, I'll add them to the list. If you're in the Discord, please @ me or please message me on where ever you find this. I think some of these are name your price/free to download, but if you can, buy their merchandise and physical copies of their music. In the current climate, this is especially vital.

If the band is part of a label, I'll post the whole label instead, so please keep an eye/set up email alerts for these accounts.

Sometimes Bandcamp artists delete their music from the website and if this happens, we will turn the entire row grey. If you find the bands music elsewhere, feel free to contact us so we can re-add.

Please do not suggest any band which is already releasing music this by looking at which Bandcamp page their music is being posted on.

Key:

Name Your Price

NYP bands are offering their music for free, so you can choose to pay if you want.

First Release on Bandcamp

First releases are marked in teal, bands just starting out deserve exposure.

Current Favourite

A band/release that I think deserves some recognition, think of it as being "featured".
