

XYZ HR Dataset

The purpose of this project is to clean and manipulate the HR dataset provided by XYZ (a fictional company) to achieve the following:

- 1- Have a clean and better organised dataset
- 2- generate summary reports through pivot tables
- 3- generate supporting visualisations

*Note: this data set has been taken, after asking for permission, from the course (Master SQL For Data Science by Imtiaz Ahmad on Udemy)

I first exported the dataset into CSV files from PostgreSQL, and then I opened the files and conducted the whole process with google sheets.

The dataset had three files: employees, region and departments. I put each in a new worksheet.

The region and departments tables were straightforward, simple and clear and did not need any work, so I left them as they were.

But for the employees table I did some cleaning and manipulation which I will summarise here.

The original dataset (original_employees_sheet) had the following columns: employee_id, first_name, last_name, hire_date, department, gender, salary and region_id

And it contained data about 1000 current employees of the company.

I copied the data into new sheet and called it employees. This sheet will be the main dataset which I will use later to create pivot tables and visualisations.

I took the following steps for cleaning and manipulating the data:

-- I looked for and deleted duplicates

-- I used the TRIM function to remove extra spaces

-- I made sure that all data in the hire_date column had the same format "dd/mm/yyyy"

-- Using the CONCATENATE function I added a new column to have the full name of the employee: =CONCATENATE(B2&" "&C2)

-- Using the EXTRACT function I added a new column to extract and have the year from the hire_date: =YEAR(E2)

-- To make more sense of the hire_date column I wanted to divide the employees into categories based on their hiring year (their time in the company)

Knowing that 2003 was the oldest hiring year and 2016 was the latest, I created the following categories: first year, five years, more than 5 years, less than five years, and more than ten years

For that I used nested IF: =IF(F2=2016, "First year", IF(F2>2011, "Less than 5 years", IF(F2=2011, "5 years", IF(F2<2006, "More than 10 years", IF(F2<2011, "More than 5 years",))))

-- I then replaced M and F with Male and Female in the gender column

-- Similar to what I did with the hire_date column, I also created categories for the salary column but here I used the IFS function: =IFS(

J2<30000, "Very Low Wage", J2<40000, "Low Wage", J2<65000, "Lower Middle Wage", J2<110000, "Higer Middle Wage", J2<160000, "High Wage", J2>160000, "Executive")

-- Finally I wanted to fetch the country the employee works in from the region sheet and add it to the employees sheet, for this I used the VLOOKUP function:

=Vlookup(M2,region!A\$2:C\$8,3,false)

After these steps I used the employees sheet as a Data range to create pivot tables and generate summary reports, and I also created visualisations to support those reports.

| employee_id | first_name | last_name | hire_date | department | gender | salary | region_id |
